ESG Management
—Sekisui House’s Initiatives for Sustainability
Roundtable Discussion on ESG

Working to Improve Corporate Value and Business Value as a Leading Company in ESG Management

The Sekisui House Group established the ESG Management Promotion Headquarters in June 2020. For the Group, ESG management is simply a way of putting its corporate philosophy into practice. By promoting it at all Group companies, we will make clearer, both inside and outside the Group, our aim of becoming a leading company in ESG management. In this roundtable discussion, the chairpersons of the three subcommittees responsible for promoting ESG management (Environmental Subcommittee, Social Improvement Subcommittee and Governance Subcommittee) exchanged opinions on the roles of each subcommittee, their initiatives and progress to date, and medium-to-long-term issues for ESG management.

Q: What is Sekisui House’s approach to ESG management?

Yoshida: In 2020, Sekisui House set forth its global vision to make home the happiest place in the world. Considering ESG management to be key to realizing this vision, we established the ESG Management Promotion Headquarters. We are aware of the importance of instilling ESG management all the way down to the employee level, as one aspect of re-examining the fundamentals of ESG. This is why in promoting ESG management, our respective subcommittees consider initiatives that have been broken down into three categories: senior management, office-level management, and employee-level management.

Yamada: One line in Sekisui House’s code of conduct states, “We will wish for the happiness of others, and make their joy our own.” To me, ESG management is just a matter of putting the corporate philosophy into practice. In other words, the things that Sekisui House has been doing as a matter of course in its business operations already lead to ESG management. The Company has long stated that the happiness of its employees is the foundation of its management. Employee happiness sets in motion a cycle that leads to the happiness of customers and society, and ultimately to the happiness of all stakeholders.

Chikada: To realize our global vision, we set the goal of being a leading company in ESG management, but it is too easy to simply believe that putting our corporate philosophy into practice will result in achieving that goal. I therefore think it will be useful to concurrently align the entire Group under the stance that what Sekisui House does is one facet of ESG management. Structuring the idea in that way makes it simpler and more understandable, and it can also be used as a basis for judgment in various situations, so I think it will help employees understand ESG management. In promoting ESG management, it is very important to explain it in a way that is easily understandable, rather than simply disseminating our beliefs.

Q: What are some initiatives of the ESG Management Promotion Headquarters, and what are their features?

Yoshida: For participation by all employees, the ESG Management Promotion Headquarters’ first step was to conduct dialogue on ESG among employees. The Group conducts business by setting target items to be addressed, coming up with creative ideas for achieving those targets, and getting all employees to work together toward them. To give greater impetus to these efforts, it is important for employees to act on their own volition and to make efforts to understand each other. These things can be achieved by increasing opportunities for communication—that is, through ESG dialogue. We conducted dialogue on how to make employees, customers and society happy. Everyone had opinions about what makes them happy and accepted what others had to say without taking a confrontational stance, which gave rise to reinvigorated communication. I strongly sense that this initiative has been a breath of fresh air in the Group.

Chikada: The establishment of the ESG Management Promotion Headquarters and the start of various new initiatives that encompass all employees, such as ESG dialogue, have undoubtedly engendered a Group-wide sense that things are changing. Until ESG dialogue, there certainly had never been an opportunity for all employees to discuss happiness during working hours. I have heard from people that they feel the change happening in the Group. In addition, our measures to spread ESG management have been successful, including moving the Group newsletter to the intranet to
Roundtable Discussion on ESG

Yoshida: In considering how employees address ESG personally, and how that will connect to the Company, I now think we should further deepen understanding and promote adoption, starting from their awareness and ultimately leading to actions based on their own ideas. 

Chikada: Our global vision and management messaging about becoming a leading company in ESG management have taken root among employees. Lately, I sense that employees’ understanding of ESG management has deepened considerably since we started. I think most people in the Group feel that ESG management is being conducted not just by the ESG Management Promotion Headquarters alone, but by the entire organization.

Q. What initiatives is each ESG subcommittee currently focusing on, and what are the features of these initiatives?

—-We will further accelerate efforts to date, clearly indicate the priority themes of the three ESG subcommittees, and take new steps.

Chikada: The Environmental Subcommittee is conducting various initiatives with a long-term view to achieve carbon zero by 2050. We are particularly emphasizing reducing Sekisui House Group’s CO2 emissions at the stage of product use (during occupancy), which accounts for most of the Group’s emissions. In other words, we are focused on promoting net zero energy houses (ZEH). ZEH contributes significantly not only to decarbonization but also to residents’ comfort and the Company’s business, making it a representative example of the ESG management many of our employees are already involved in. It is an easily understood example of ESG management, and it involves the entire Group. Since 2021, we have been focusing on decarbonization of suppliers. CO2 emitted during the manufacturing of materials and components also accounts for a significant proportion of emissions. We have told our suppliers about this and have held study sessions to generate opportunities for them to work with us to decarbonize. As a result, the number of suppliers who have now obtained SBT* accreditation has increased. The initiative to decarbonize suppliers is also leading to other positive impacts. For example, since our suppliers do business with other builders, it is contributing to the decarbonization not just of Sekisui House, but the housing industry as a whole. Moreover, in 2021 we were able to quantitatively evaluate the contribution to urban biodiversity from our Gohon no Ki (five trees) Project. This project, which promotes the use of indigenous species in

Yamada: As for improving external evaluation, such evaluation is underpinned by social demands, and the parameters of social demands change with the times. Anticipating such change generates forward-thinking initiatives, and the participation of all employees is essential for their successful implementation. Because of this linkage, the three themes set by the ESG Management Promotion Department are always interrelated. To me, participation by all employees is the most important. I want each employee to view ESG management as their own issue, and to deal with, understand, and talk about it on their own terms. It is not easy to see how one’s work is part of ESG management. That is why it is important to engage in ongoing dialogue.

Chikada: The starting point of Sekisui House’s initiatives for the environment was the Environmental Future Plan we announced in 1999. I think the plan’s fundamental approach of considering the future of people, communities and the Earth in its environmental vision and working to get closer to realizing that vision through our business activities has led to our forward-thinking initiatives. Today, there are many difficult environmental problems, and I think we should emphasize this approach in addressing them.

Yamada: For improving external evaluation, such evaluation is underpinned by social demands, and the parameters of social demands change with the times. Anticipating such change generates forward-thinking initiatives, and the participation of all employees is essential for their successful implementation. Because of this linkage, the three themes set by the ESG Management Promotion Department are always interrelated. To me, participation by all employees is the most important. I want each employee to view ESG management as their own issue, and to deal with, understand, and talk about it on their own terms. It is not easy to see how one’s work is part of ESG management. That is why it is important to engage in ongoing dialogue.

share Company-wide efforts on a daily basis and encouraging employees to freely express their ideas in Sekisui House’s unique SHIP Collective Communication and Innovation Awards Program. I believe that this has given rise to the feeling that everyone is involved in the ESG management of the Group.

Yamada: In terms of forward-thinking initiatives, Sekisui House has always generated results effectively based on consideration of the essence of what must be done. In 2005, the Company began to actively hire female sales representatives as a management strategy. At that time, a front-line workplace environment that made women feel comfortable had not yet been adequately established. However, management felt strongly that the Company would not grow without the active participation of women and has since led the improvement of support for work-life balance and the workplace environment, and continuing support tailored to the issues faced in each job type. As a result, we have fostered a corporate culture of respect for diversity, which has since led to more forward-thinking initiatives than at other companies. I regard 2005 as our first step toward diversity. The second step was in 2014 when not just women, but a greater range of diverse human resources started playing more active roles, and the third step was in 2018 when we started encouraging all eligible male employees to take childcare leave.

Chikada: The Environmental Subcommittee is conducting various initiatives with a long-term view to achieve carbon zero by 2050. We are particularly emphasizing reducing Sekisui House Group’s CO2 emissions at the stage of product use (during occupancy), which accounts for most of the Group’s emissions. In other words, we are focused on promoting net zero energy houses (ZEH). ZEH contributes significantly not only to decarbonization but also to residents’ comfort and the Company’s business, making it a representative example of the ESG management many of our employees are already involved in. It is an easily understood example of ESG management, and it involves the entire Group. Since 2021, we have been focusing on decarbonization of suppliers. CO2 emitted during the manufacturing of materials and components also accounts for a significant proportion of emissions. We have told our suppliers about this and have held study sessions to generate opportunities for them to work with us to decarbonize. Roundtable Discussion on ESG

Yoshida: We positioned 2018 as our first year of governance reform, which we are conducting on three levels: senior management, office management and employees. I think our initiatives to date have elevated our senior management to Japan's top echelon in terms of governance. The Governance Subcommittee is now working to strengthen Group governance. Measures such as the establishment of Sekisui House Real Estate Holdings and Sekiwa Construction Business Headquarters have served to align approaches to governance. Going forward, we aim to achieve a global level of governance by strengthening Group governance and seeking the ideal form for the Board of Directors through reference to feedback collected in our shareholder relations activities. We are also promoting training programs that enhance integrity and a pool of talent to develop human resources for the coming era, with the understanding that they are crucial for corporate governance to function.

Yamada: The initiatives of the Social Improvement Subcommittee are wide-ranging. We mainly deal with Company-wide issues that should be addressed cross-departmentally. To achieve health, connectedness and learning, which are factors for realizing the happiness targeted in our global vision, I want our initiatives to center on promoting employees’ physical and mental health, establishing connections with people inside and outside the Company, building networks, and creating various opportunities for learning. We are focusing on “happiness health management.” However, rather than leaving it to the Company to decide on measures, we launched the Happiness Health Project, another unique Sekisui House initiative in which employees take the lead in promoting health management based on happiness. In addition, our initiatives for human rights due diligence are ongoing, and encompass the supply chain as well as the Company. Promoting initiatives that consider the human rights of all stakeholders is a key topic for Sekisui House because it leads to sustainable growth for the Group and contributes to society. From the perspective of diversity, we are focusing on initiatives such as encouraging all eligible male employees to take one month or more of childcare leave, a program we introduced in September 2018, and promoting understanding of LGBTQ and other sexual minorities. I am confident that understanding and experiencing various viewpoints will help internalize diversity and free Sekisui House employees from unconscious bias.

Chikada: In the Environmental Subcommittee, we are promoting the three areas of decarbonization, biodiversity conservation and resource recycling, all of which are important issues that need to be addressed from a global perspective. The level of demand from society is rising at a tremendous speed and I honestly feel that these are difficult times. I believe it is important for all of us to keep thinking about what Sekisui House can and should do to make home the happiest place in the world.

Yamada: Sekisui House's task and its ultimate goal is to become a happier place for its employees to work. Our employees work hard to offer happiness to our customers and society, but there must be a win-win relationship for all three. I think it is important for the Social Improvement Subcommittee to provide support through system and workplace improvements and corporate culture reforms. Also, rather than providing the same opportunities to all, I think it is important for the Group to provide opportunities suited to each individual, so everyone has a chance to play an active role. A workplace where employees feel at ease will stimulate communication, leading to innovation and a Company that grows spontaneously.

Yoshida: ESG management makes the sustainability of corporate management and business growth clear to long-term investors. I am proud to say that our governance reforms so far have considerably enhanced effectiveness. However, contemporary demands are changing day by day, requiring further reform. To continue conducting reform, the Governance Subcommittee will work to foster an organizational culture of innovation and communication.

Q. What are some of your future tasks as the chairperson of your subcommittee?

——We will promote initiatives that lead to sustainable corporate growth, with the aim of the participation of all employees in ESG management.

Chikada: In the Environmental Subcommittee, we are promoting the three areas of decarbonization, biodiversity conservation and resource recycling, all of which are important issues that need to be addressed from a global perspective. Editorial Policy

Section 6 describes the Sekisui House Group’s approach to and initiatives for environment, social, and corporate governance (ESG). Information in each section is organized under the headings of Governance, Strategy, Risk Management, Indicators and Targets, and Initiatives and Other Related Information, keeping in mind the approach to ESG information disclosure presented by the International Sustainability Standards Board created by the IFRS Foundation in November 2021. In addition, in order to ensure the completeness of the information reported in this section, we refer to the disclosure requirements of the GRI Standards and the criteria for Home Builders, as defined in the Sustainable Industry Classification System (SICS) of the US Sustainability Accounting Standards Board (SASB). Furthermore, various information on climate change is disclosed based on the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD).

The following publications were used as reference for identifying and compiling the information presented in this report.
- Environmental report: The Environmental Reporting Guidelines 2018, published by the Ministry of the Environment
- CSR report: Guidance on Social Responsibility ISO 26000

Moreover, this report complies with the GRI Core Standards, by including the general disclosures (those whose publication is required to ensure compliance with the Core Standards) as well as the material disclosures required under the standards.

GRI Content Index / SASB Index / Recommended disclosures from the TCFD

Report Content and Topic Boundaries
In principle, this report encompasses Sekisui House, Ltd. and its 335 consolidated subsidiaries. Any instances of departure from this scope are indicated as such in the text.

- Period covered: FY2021 (February 1, 2021 to January 31, 2022)
- Date of publication: Published annually. (Previous report was issued in June 2021)

Third-Party Assurance
To enhance the credibility of the information in this report related to our environmental and social performance indicators, we received third-party sustainability report assurance from KPMG AZSA Sustainability Co., Ltd. that this information complies with ISAE 3000 and ISAE 3410, the International Standards on Assurance Engagements issued by the International Auditing and Assurance Standards Board.

ESG Management Promotion Structure

ESG Promotion Committee
In June 2020, the Sekisui House Group established the ESG Management Promotion Division (the current Division of Finance and ESG), and established the ESG Management Promotion Headquarters to administer the planning, drafting, and implementation of the Group’s basic ESG management policies. This organizational reform represents a statement of our determination to be recognized as a leading company in ESG management, in both name and reality. It will not only promote Group-wide initiatives related to ESG management, but also provide support and coordination, information collection and analysis, and unified information dissemination both inside and outside the Company.

The ESG Promotion Committee is a consultative body to the Board of Directors with two outside members who have specialized knowledge. The committee enhances its effectiveness by meeting once every three months to discuss ESG issues and relevant management initiatives. The details of discussions at the ESG Promotion Committee are reported to the Board of Directors for deliberation.

In addition, we further promote ESG management in cooperation with Group companies in Japan and overseas based on discussions at the ESG Promotion Committee.

The ESG Promotion Committee has established three subcommittees, each of which respectively promotes one aspect of ESG: the Environmental Subcommittee, the Social Improvement Subcommittee, and the Governance Subcommittee. The chairpersons of these committees appoint individuals in charge, and set goals and key performance indicators. The subcommittees collaborate with each division and Group company inside and outside of Japan, and take the lead as flag-bearers of our ESG management principles, while implementing effective initiatives. In addition, they promote an understanding of and disseminate these initiatives among all employees through progress reports, provide feedback on issues, and propose improvements for dissemination.

The ESG Management Promotion Headquarters we established in 2020 will drive the implementation of our ESG management to raise awareness and foster understanding among all employees for the ongoing growth of our business under two themes: the happiness of everyone involved with the Sekisui House Group, and continued contribution to forward-thinking initiatives that will help build a better society through our businesses.

Environmental Subcommittee
We promote the decarbonization of all Group business activities, as well as plan and implement environmental management systems for conserving biodiversity and recycling resources. We also collect environment-related information and disclose this in an annual report. We conduct measures to raise internal and external stakeholders’ awareness of environmental management policy and environmental impacts. Environmental initiatives are central to our global vision to make home the happiest place in the world. We therefore implement sophisticated initiatives to reduce our environmental impact and risk exposure, while creating business opportunities.

Social Improvement Subcommittee
The Sekisui House Group grows when our employees grow. We therefore embrace and make the most of diversity, while instilling a corporate culture of innovation and communication throughout the Group. Our goal is to maximize the happiness of our customers, employees, and society. Diversity and inclusion are the practical aspects of our corporate culture, systems, and workplace environment for encouraging employee motivation and self-directed career development.

Governance Subcommittee
In our ongoing efforts to strengthen corporate governance, we consider it important to create an open workplace culture, and therefore we make every effort to ensure all employees understand our corporate philosophy and the essence of ESG management. To strengthen Group governance, we have established a system to activate communication among governance-related human resources, led by the heads of each organization in Japan and overseas, and are also working to strengthen the development and conduct appropriate allocation of governance-related human resources throughout the Group.
ESG Management at the Sekisui House Group

The Sekisui House Global Vision

Propose happiness through the integration of technologies, lifestyle design and services

Make Sekisui House technologies the global de facto standard

Make home the happiest place in the world

Become a leading company in ESG management

ESG Management Basics: The Starting Point for ESG Implementation

ESG Basics draw on our corporate philosophy to provide all employees with a management platform for implementing fundamental actions for building an ESG management foundation. We have systematized our conventional dialogue, employee survey-based dialogues, training, and other elements into three categories of ESG dialogue, human relations training, and compliance training.

We have determined core future themes for each category, and will deploy them when implementing ESG dialogues and other elements of the ESG Basics that are the starting point on action for ESG.

All Employees to Participate in ESG Dialogue in Order to Make ESG a Personal Matter

Implementing ESG dialogue, one of the ESG Basics, is an important initiative that creates opportunities for employees to recognize that what Sekisui House does as a company is but one facet of ESG management, and to internalize ESG as members of that company. We launched initiatives in October 2020 by job level with the theme of making employees, customers, and society happy through our businesses guided by the overall objective of encouraging employees to act and innovate on their own initiative.

Participants in ESG dialogue are deepening their understanding of ESG management by internalizing it, in ways such as paying attention to happiness in values other than their own.

Themes for 2022 initiatives are innovation, social contribution activities, individual and workplace happiness, and self-directed ESG.

Facilitators who are Group employees will take the lead in selecting dialogue topics from these four themes. Small groups of four or five people will discuss their selected theme to encourage awareness. Ongoing ESG dialogue will instill a personal understanding of ESG management among all employees.

Three Elements of ESG Management Promotion

In order to be continually sought after by society as a leading company in ESG management, it is important to think and act on how we respond to all stakeholders and how we can make them happy.

We have therefore identified three key elements for promoting ESG management: participation of all employees, forward-thinking initiatives, and improvement of external evaluations. Forward-thinking initiatives are new challenges that the Group keeps on taking on, such as Green First ZERO, the Well-Being Survey and childcare leave for male employees. By promoting these key elements, solving social issues, fostering employees who can relate to ESG concept themselves and taking actions with the Participation of All Employees, we will open a path to becoming a leading company in ESG management.

The participation of all employees is the most important of the three elements in ESG management, so we have structured a platform that encourages all employees to recognize, understand and embrace ESG.

A Platform That Links Recognition and Action

Find meaning in recognition

ESG Basics Systematic dialogue and training

Find meaning in understanding

E-learning Classes and workshops

Embrace enthusiastically

Online seminars Tsunagari Café Lunchtime meetings

Vision of ESG in Which Employees Take Part

An enterprise exists within ESG concept
Our Participation in International Initiatives and Activities with Government and Industry Groups

We are actively participating in international initiatives to contribute to the resolution of social issues on a global scale. In Japan, the Sekisui House Group has a large role and responsibility in improving housing and living conditions. We thus participate in the initiatives of many industry groups.

### Contributing to a Decarbonized Society

The Sekisui House Group aims to be a leading company in ESG management that solves social issues and builds a sustainable society by promoting environmental strategies integrated with its business activities, to realize its global vision to make home the happiest place in the world. In particular, we have positioned the prevention of global warming as an important issue since the announcement of the Environmental Future Plan in 1999, and are leading the housing industry in a variety of effective initiatives.

#### Overview of Initiatives

1. **Decarbonizing Housing and Other Facilities, and Strengthening Disaster Resilience**

   —Promoting low-carbon products—

   **Promote ZEH** through Green First ZERO detached houses

   The largest proportion of the Sekisui House Group’s CO₂ emissions, at 53%, is in the residential stage of supplied housing (Scope 3, Category 1). In order to reduce these emissions, we are working to promote ZEH, which is more effective in reducing CO₂ emissions. ZEH homes are also highly disaster resilient, with high thermal insulation performance for superior comfort, and solar power generation as standard equipment so that electricity is available even during power outages, allowing people to live with peace of mind amid complex roof shapes. Tile-based solar panels are inconspicuous when viewed from the outside, allowing for both ZEH and the beautiful appearance desired by customers.

   We believe that ZEH can also respond to changes in lifestyle due to the spread of COVID-19. The energy efficiency and energy-generating performance of ZEH also help to offset the increased power consumption that can be a concern when the occupants are working from home. In addition, the bright and spacious interior designs we recommend make it possible to live comfortably with less of the stress that can arise from spending more time at home. Going forward, we will continue to respond to the new needs of the times, and aim to further evolve ZEH.

   In FY2021, our efforts to date to promote the popularization of ZEH were well regarded, and we received the Energy Conservation Center Chairman’s Award in the energy conservation case study category of the FY2021 Energy Conservation Grand Prize (organized by the Energy Conservation Center, Japan, and supported by the Ministry of Economy, Trade and Industry).

   In FY2021, 92% of Sekisui House’s detached houses were ZEH buildings. This far exceeds Japan’s overall ZEH ratio of 16.8%. In addition, the cumulative number of ZEH buildings we have constructed since the launch of this product in FY2013 is 69,163 (as of March 31, 2022). The Japanese government’s 6th Strategic Energy Plan, which was announced in 2021, sets the goals of having new houses built from 2030 meet the ZEH standard for energy efficiency and installing solar power generation equipment in 60% of new detached houses by 2030, both of which are targets that we have met.

   For the popularization of ZEH, it is important to have benefits for residents that can be received by many people. For example, a home designed with an atrium or large living room windows offers a bright, open, and comfortable space, but these features can be disadvantageous in terms of energy efficiency. By adopting windows with high thermal insulation performance, we have achieved both an open indoor environment and energy efficiency.

   As for solar panels, our standard feature of proprietary tile-shaped solar panels allows us to install high-capacity panels, even on structures with complex roof shapes. Tile-based solar panels are inconspicuous when viewed from the outside, allowing for both ZEH and the beautiful appearance desired by customers.

   We believe that ZEH can also respond to changes in lifestyle due to the spread of COVID-19. The energy efficiency and energy-generating performance of ZEH also help to offset the increased power consumption that can be a concern when the occupants are working from home. In addition, the bright and spacious interior designs we recommend make it possible to live comfortably with less of the stress that can arise from spending more time at home. Going forward, we will continue to respond to the new needs of the times, and aim to further evolve ZEH.

   In FY2021, our efforts to date to promote the popularization of ZEH were well regarded, and we received the Energy Conservation Center Chairman’s Award in the energy conservation case study category of the FY2021 Energy Conservation Grand Prize (organized by the Energy Conservation Center, Japan, and supported by the Ministry of Economy, Trade and Industry).

   ---

   1. Net zero energy house, a house that aims for an annual primary energy balance of zero through energy efficiency and energy generation, while providing a comfortable indoor environment. Green First ZERO is the brand name of our detached ZEH homes with standard adoption of a solar power generation system.

   2. The ratio of ZEH, Nearly ZEH, and ZEH Oriented (in areas with a minimum snowfall of 100 cm) dwellings constructed between April 2021 and March 2022 in all areas excluding Hokkaido. The ratio for Hokkaido was 65%.

Contributing to a Decarbonized Society

**Disaster resilience of Green First ZERO**

In preparation for earthquakes, typhoons, and various other natural disasters, a clear need exists for disaster-resilient zero energy houses in which the buildings themselves are robust, and which can support daily living while securing living spaces, food, water, and energy in the aftermath of a disaster. We are able to propose disaster-resistant zero energy houses that meet the standards of living demanded by customers in the event of a disaster, by combining three types of batteries: solar cells that can supply electricity on sunny days; fuel cells that can generate electricity at night and in rainy weather, combining three types of batteries: solar cells that can supply electricity on sunny days; fuel cells that can generate electricity at night and in rainy weather, and storage batteries that can store surplus power generated by solar cells and fuel cells. Then, we can quickly determine the safety status of the residents as well as the damage situation. By utilizing the organizational strength of the Company, we can establish a system and provide support so that owners can resume their daily lives as soon as possible while making our nationwide factories available as a foundation to support regional restoration. In this way, Green First ZERO+R, a disaster-resistant net zero energy house (ZEH), protects the lives of our customers through a support system that leverages our organizational capabilities, as well as the resilience of the building itself. In 2004, Sekisui House Group became the first house builder in Japan to launch an energy-saving, disaster-resistant house that can provide a week's supply of energy, water, and food so that people can remain in their homes in the event of a disaster. Green First ZERO+R is an evolution of this concept, further enhancing both the mitigation and adaptation required in response to climate change.

Going forward, we will continue to lead the housing industry by evolving Green First ZERO, and developing and spreading the value of ZEH, which contributes to the happiness of residents and society at large.

**Expansion to Group companies**

In order to expand our business domain in housing construction, our Group is working on conventional wooden housing in addition to our mainstay industrialized housing. While Group companies, Sekisui House noie and Sekiwa Construction are developing the noie brand and the ki no ie brand, respectively, the commitment to low carbon emissions through zero energy houses is common to all Group companies. In FY2021, 124 of the 490 buildings sold under the noie brand, and 16 of the 118 buildings sold under the ki no ie brand were ZEH. We are making efforts to match each of these brands, which propose simple and just-right home building, though means to discern an ethical orientation among them, in terms of choosing to live in an energy-saving, disaster-resistant house that can provide a week's supply of energy, water, and food so that people can remain in their homes in the event of a disaster. Green First ZERO+R is an evolution of this concept, further enhancing both the mitigation and adaptation required in response to climate change.

Promotion of ZEH in Sha Maison rental housing

Approximately 30% of the CO2 emissions attributable to the residential sector in Japan come from multi-unit housing complexes. Out of this, rental housing accounts for a large fraction, at 23%. Therefore, the conversion of rental housing to ZEH is essential for decarbonization. We have designated ZEH in our rental housing brand Sha Maison as Sha Maison ZEH, and have been promoting its full-scale popularization since FY2020. In FY2021, we received orders for 8,501 ZEH dwelling units, which is more than twice the number in the previous fiscal year.

Two types of ZEH standards apply to multi-unit housing complexes: ZEH-M, which applies the net zero energy standard to the entire residential building, including common areas; and ZEH, which applies the net zero energy standard to the individual housing units. In ZEH-M, although the entire building is zero-energy, the dwelling units are not necessarily ZEH. For this reason, from a resident-first perspective, we first work to promote ZEH in dwelling units where residents can enjoy the benefits of ZEH, including comfort and reduced utility costs. By making as many units as possible ZEH, we are working to popularize rental housing that also meets the ZEH-M standard as a result.

In order to promote ZEH in rental housing, which entails higher costs, it is also important to create business benefits for the owners. We believe that as we move toward a decarbonized society, the need for ZEH will eventually increase in rental housing, as well. ZEH in dwelling units, which present benefits for residents, will prevent occupancy rates and rents from declining, and should lead to long-term stable management. According to a survey we conducted in FY2021 among young people, who are the main users of rental housing, it was clear that they are familiar with the effects of climate change, and we were able to discern an ethical orientation among them, in terms of choosing to live in an environmentally friendly manner in order to stop it. Because this type of thinking is expected to increase in the near future, the conversion of rental housing to ZEH can be considered a good investment.
Contributing to a Decarbonized Society

In order to popularize Sha Maison ZEH, it is necessary to properly inform prospective tenants of the benefits of ZEH. For this reason, the role of an intermediary will be important. In FY2021, we established a ZEH Subcommittee consisting of members of each company of Sekisui House Real Estate, a Sekisui House Group company, to discuss how to recruit and manage tenants for Sha Maison ZEH, so that it can be properly operated as ZEH rental housing after construction. We are engaged in popularization efforts that utilize our Group’s strengths, in which we appeal to owners, while Sekisui House Real Estate appeals to prospective tenants.

We are engaged in popularization efforts that utilize our Group’s strengths, in which we appeal to owners, while Sekisui House Real Estate appeals to prospective tenants. In FY2021, we completed four buildings incorporating ZEH units in Japan with all ZEH units, we are also promoting the ZEH standard for the condominium market. In FY2021, we completed four buildings incorporating ZEH units in Japan with all ZEH units, we are also promoting the ZEH standard for the condominium market.

1. For a multi-unit housing complex, four types of ZEH standards are defined, depending on the difference in energy efficiency. ZEH-M is capable of reducing primary energy consumption by 100% or more on balance, while Nearly ZEH represents a reduction in CO2 emissions of more than 75%. ZEH Ready represents a reduction of more than 50%, and ZEH Oriented represents a reduction of more than 20%. In addition, ZEH-M and ZEH differ in their definitions of evaluation targets, which are “residential building” for the former and “dwelling units” for the latter.

2. ZEH-M and ZEH differ in their definitions of evaluation targets, which are “residential building” for the former and “dwelling units” for the latter.

3. Net zero energy building, a building that aims for an annual primary energy balance of zero through energy efficiency and energy generation while providing a comfortable indoor environment

4. An emergency corporate survival plan or business continuity plan that makes strategic preparations to avoid an interruption of critical operations in the event of the materialization of risks such as a disaster.

Promotion of ZEH in GRANDE MAISON condominiums

Starting with GRANDE MAISON Kakuouzan Kikuzakacho (Nagoya City, Aichi Prefecture), which was built in February 2019 and was the first condominium in Japan with all ZEH units, we are also promoting the ZEH standard for the condominium market. In FY2021, we completed four buildings incorporating 160 ZEH dwelling units, bringing the cumulative total to 192 dwelling units in seven buildings. In FY2022, we plan to complete 4 buildings with 399 ZEH dwelling units, including a high-rise condominium, and expect to achieve the target of a cumulative total of 540 dwelling units under the 5th Mid-Term Management Plan.

In our condominiums, we design ZEH with an emphasis on livability, which is a benefit for the tenants. For example, large openings, which are an extremely high heat insulation performance.

The ratio of ZEH properties actually sold was 39.4% in FY2021. We plan to increase this ratio to 85% in FY2022, and 100% in FY2023.

Meanwhile, as an initiative to reduce CO2 emissions in our business activities, from FY2021 we will begin to use ZEB for newly constructed offices owned by the Group, as a general rule. Five ZEB have already been constructed.

This initiative has the goal of using ZEB accounting for the majority of building orders in FY2025.

Promotion of ZEB for non-residential construction

Following detached houses and multi-unit buildings, we are promoting ZEB3 zero energy buildings in non-residential construction, as well. By clearly and concretely highlighting the benefits of ZEB at the time of proposal, the number of orders received and construction starts have been on an upward trend, especially for use as offices. In addition, the number of applications, such as for nursing care facilities and clinics, is also expanding, especially among businesses that are proactive in addressing environmental considerations and SDGs.

In FY2021, we released a proposal style called “Green First Office” for office buildings. We also completed construction of a nursing care facility with enhanced capabilities to address business continuity planning (BCP) and infection control measures, in addition to ZEB specifications. We completed 36 buildings, primarily for use as offices, for a cumulative total of 68 buildings.

Promotion of environment-based remodeling of existing houses

Sekisui House Remodeling proposes Idocoro Dan-netsu insulation remodeling with the emphasis on the living room, dining room, and kitchen, or where people spend most of their time. We focus on ensuring comfort over the long term in houses over 20 years old because they are not as well insulated as modern newly built houses. In FY2021, remodeling was implemented in a total of 1,338 cases, promoting decarbonization by reducing the air conditioning energy load, while improving the comfort of existing houses. In terms of equipment, we proposed replacing existing equipment with energy-efficient...
Contributing to a Decarbonized Society

devices such as Ene-Farm. In addition to increasing the rate of self-consumption of surplus power by adding storage batteries to homes equipped with solar power generation systems that have reached the post-FIT period (end of the purchase period for the feed-in tariff system), thereby creating benefits in terms of utility costs, we are also promoting enhanced resilience by allowing people to use electricity for living activities, even during power outages associated with an increasing number of natural disasters due to climate change.

We are also focusing on SumiStock, an initiative to promote the proper evaluation of the value of existing houses as well as their circulation, as part of our efforts to promote the decarbonized remodeling of existing housing. We believe that there will be more opportunities for investment in remodeling, if the value of existing housing is properly assessed.

The government’s goal of reducing greenhouse gas emissions attributable to the residential sector by 66% by 2030 compared with the FY2013 baseline depends on decarbonizing existing housing, which requires a range of policy support in the future. Sekisui House has supplied more than 2.5 million housing units to date, and will promote the decarbonization of existing housing through remodeling proposals and the transfer of ownership for approximately 800,000 detached houses and 230,000 rental housing Sha Maison units that are more than 10 years old, while taking advantage of various types of support from the government.

Initiatives for housing in harmony with the environment

In addition to adopting the concept of “housing in harmony with the environment” in our product development, we remain focused on providing good housing and attractive cityscapes through the “Common’s” cityscape evaluation system, reflecting these qualities in our development of custom-detached houses, condominiums, and gardens. Housing that combines global environmental conservation (low impact), affinity with the surrounding environment (high contact), and amenities and a healthy living environment, can be certified as “in harmony with the environment” by the Institute for Built Environment and Carbon Neutral for SDGs. “Housing in harmony with the environment” is an initiative aimed at creating better housing through compliance with certification standards under CASBEE for New Detached Houses, part of the Comprehensive Assessment System for Built Environment Efficiency promoted by the Ministry of Land, Infrastructure, Transport and Tourism.

The housing provided by Sekisui House, including Green First ZERO, has the characteristics of “housing in harmony with the environment” that reduce the burden on the global environment and allow homeowners to live comfortable lives in harmony with the planet. Through this housing, we aim to contribute to the emergence of a society committed to sustainability in housing and community development.

CASBEE, the Comprehensive Assessment System for Built Environment Efficiency, has been adopted mainly in Japan’s ordinance-designated large cities. Our CASBEE-certified personnel play a central role in promoting this initiative.

Percentage of energy-efficient homes

Sekisui House has been a leader in energy conservation in the housing industry by adopting insulated, double-glazed windows, sashes, and insulated aluminum sashes in 2000, by using next-generation energy-efficiency standards in 2003 as well as high-efficiency water heaters as standard in all detached houses in 2005, and by launching ZEH products in 2013. We are now taking the same approach in our rental housing, as well. As a result, as of FY2021, 98% of detached houses and 97% of rental houses meet the government’s certification standards for low-carbon buildings (standards related to external skin and primary energy consumption). Sales of this energy-efficient housing account for 97% of the Group’s total sales in the custom-detached houses and rental housing businesses.

Decarbonization of Business Activities and Adaptation to Climate Change

Promote RE100 through Sekisui House Owner Denki

In 2017, the Sekisui House Group became the second Japanese company and the first company in the housing industry to join RE100, an international initiative aimed at decarbonizing business activities, and is working to replace power for use in our Group’s business operations with power derived from renewable sources of energy (hereinafter, “renewable energy”). Generally, renewable energy is procured through the purchase of green power certificates and the installation of solar power generation systems. However, in addition to purchasing emission credits, we are also procuring surplus solar power from our customers under the post-FIT mechanism, through Sekisui House Owner Denki.

Because we were an early adopter of solar power generation systems in our houses, the annual amount of power generated by all of the solar power generation systems we had installed was estimated to be over 700 GWh at the start of the RE100 initiative, which was more than five times the 120 GWh annual power consumption of the entire Group at that time. Based on this, we estimated that we would be able to achieve RE100 in around 2040, if we could procure surplus power from 20–30% of our customers under the post-FIT power generation systems that have reached the post-FIT period (end of the purchase period for the feed-in tariff system), thereby creating benefits in terms of utility costs, we are also promoting enhanced resilience by allowing people to use electricity for living activities, even during power outages associated with an increasing number of natural disasters due to climate change.

2

5

Overview of Sekisui House Owner Denki

Sekisui House has been a leader in energy conservation in the housing industry by adopting insulated, double-glazed windows, sashes, and insulated aluminum sashes in 2000, by using next-generation energy-efficiency standards in 2003 as well as high-efficiency water heaters as standard in all detached houses in 2005, and by launching ZEH products in 2013. We are now taking the same approach in our rental housing, as well. As a result, as of FY2021, 98% of detached houses and 97% of rental houses meet the government’s certification standards for low-carbon buildings (standards related to external skin and primary energy consumption). Sales of this energy-efficient housing account for 97% of the Group’s total sales in the custom-detached houses and rental housing businesses.

Percentage of energy-efficient homes

Sekisui House has been a leader in energy conservation in the housing industry by adopting insulated, double-glazed windows, sashes, and insulated aluminum sashes in 2000, by using next-generation energy-efficiency standards in 2003 as well as high-efficiency water heaters as standard in all detached houses in 2005, and by launching ZEH products in 2013. We are now taking the same approach in our rental housing, as well. Sales of this energy-efficient housing account for 97% of the Group’s total sales in the custom-detached houses and rental housing businesses.
Contributing to a Decarbonized Society

FIT mechanism, and established it as a target. In actuality, we have been able to procure such power from roughly 50% of our customers, and expect to achieve RE100 in around 2030. The amount of renewable energy purchased in FY2021 through Sekisui House Owner Denki was approximately 36.5 GWh, accounting for roughly 33.5% of the Group’s total power consumption.

In addition, Sekisui House Owner Denki also creates benefits for cooperating electric power companies by making large contracts for the Group's business-use power. This makes it possible to set the unit price for purchasing surplus power higher than the market price, leading to higher customer satisfaction. In addition, we expect to be able to achieve RE100 while controlling the cost of installing renewable energy.

Collaboration with suppliers to decarbonize the production stage

CO₂ emissions when purchasing finished and raw materials from the supply chain (Scope 3, Category 1) account for the second largest share of the Sekisui House Group’s CO₂ emissions, at 35%. In FY2021, we began working with suppliers to reduce these emissions.

Promoting 100% electrification of Company vehicles

Company vehicles account for roughly 30% of the Sekisui House Group’s CO₂ emissions. This reduction is a major theme for the realization of a decarbonized society.

Since FY2011, we have been working to reduce CO₂ emissions by sequentially installing “telematics**”* in our commercial vehicles (approximately 11,000 vehicles), educating employees on safe driving and raising their awareness of eco-friendly driving, and replacing our vehicles. As a result, CO₂ emissions from business vehicles in FY2021 were reduced by 669 tonnes (2.4%) compared with the previous fiscal year. Compared to FY2011, we were able to achieve a significant reduction of 38.3%.

In addition, we are promoting the replacement and introduction of electric vehicles such as hybrid electric vehicles (HEVs) and battery electric vehicles (BEVs), and have set a target for the 100% electrification of Company vehicles by 2030, which currently stands at roughly 7%, and have begun initiatives to achieve this goal. As a start, the pilot introduction of BEVs was launched in February 2022. In addition to HEVs, which are being introduced at a rapid pace, we are actively working to introduce BEVs in-house, and by utilizing electricity derived from renewable energy through Sekisui House Owner Denki, we aim to further significantly reduce CO₂ emissions from Company vehicles, and contribute to the realization of a decarbonized society.

* Telematics is a system that provides information on vehicle operation, such as usage, fuel consumption and dangerous operation, using devices fitted in the vehicles and communication terminals.

Roadmap for Electrification of Company Vehicles

Office LED initiatives

The Sekisui House Group has been working to convert office lighting to LED since FY2018. In FY2021, at least 1,500 fluorescent lamps were replaced with LED (approx. 17,200 in total).

The annual amount of CO₂ emissions reduced as a result of this change is approximately 56 tonnes. The investment amount was 8.6 million yen, while the amount of cost reduction was 3.5 million yen, with an expected payback in 2.5 years.

3 Other Initiatives

Public policy collaboration on climate change in Japan

Through the Japan Federation of Housing Organizations, which supervises the housing industry, and the Japan Prefabricated Construction Suppliers and Manufacturers Association, we endorse practical policies such as tax incentives and the expansion of various subsidy programs to promote climate change mitigation in all aspects of buildings including housing, by the government, particularly the Ministry of Land, Infrastructure, Transport and Tourism, the Ministry of Economy, Trade and Industry, and the Ministry of the Environment, and actively cooperate with or make recommendations to these entities.

Collaboration with international public organizations

In 2008, Sekisui House declared that it would aim for carbon-free operations by 2050; since then, we have been focused on promoting the adoption of net-zero energy houses. The United Nations Framework Convention on Climate Change (UNFCCC) has proposed that urgent action is needed to reduce carbon emissions from the building and construction sector, which accounts for about one-third of global energy consumption. An urgent need exists to achieve this objective with innovative buildings and construction methods.

Against this background, we joined the Global Alliance for Buildings and Construction (GlobalABC), which was established at the UN’s COP21 conference held in Paris. We later participated in and submitted reports to the UN’s COP22 conference held in Marrakech, Morocco, and at COP23 held in Bonn, Germany. We presented a paper at a ministerial meeting on SDG 11 advocating the development of sustainable cities. There, we introduced the rationale and background for the mass introduction of our net zero energy housing.

In conjunction with COP26, we participated in the international Race to Zero campaign for decarbonization organized by the UNFCCC, through our membership in the Business Ambition for 1.5°C organized by SBT (Science Based Targets). We will continue to work with experts from around the world to minimize CO₂ emissions from the building and construction sector.
Disclosure in Line with TCFD (Task Force on Climate-related Financial Disclosure) Recommendations

Governance

The Sekisui House Group has established the ESG Promotion Committee as a consultative body to the Board of Directors to determine and implement action policies while confirming that all ESG management initiatives are reasonable and in line with societal expectations. The committee meets once every three months. Climate change position is positioned as one of the important agenda items of this committee, which evaluates the appropriateness of action policies and progress, and reports important matters to the Board of Directors.

The Company-wide, cross-departmental Environmental Subcommittee reports to the ESG Promotion Committee. Mainly composed of head office department heads involved in environmental management and individuals in charge of environmental management in each business division, this subcommittee conducts more specific and detailed discussions. In addition, the Environmental Subcommittee broadly disseminates the decisions of the ESG Promotion Committee for adoption throughout the Group, including affiliated companies. The ESG Promotion Committee ensures effective, timely management oversight by providing the director of the Board responsible for each business and other managers with routine reports and instructions on the implementation of ESG initiatives.

Strategy

In order to make steady progress toward the overall decarbonization of business that the Sekisui House Group aims to achieve, to clarify the appropriateness of the Group’s strategy and issues, various situations that may occur in the future are anticipated, and a scenario analysis is conducted while taking into consideration the specific circumstances of business activities and resources, as well as physical risks, including assumed business activities, duration, and the useful life of assets. We also evaluate transition risks based on potential scenarios for legislation, technology development, and market conditions, and identify and address climate-related risks (physical and transition risks) and opportunities for our business activities.

We have already completed risk assessments and adaptation plans for most of our businesses. However, since we have expanded our business into new areas, including M&As over the past few years, we are planning to address transition plans for all existing businesses based on their specific circumstances, by roughly 2025, in order to adapt to physical risks. In addition, we also intend to establish a system for early risk assessment and response for 100% of our new businesses in the future, and disclose the necessary information.

Table 1. Scenario Analysis Assumptions

<table>
<thead>
<tr>
<th>Item</th>
<th>Assumptions</th>
</tr>
</thead>
</table>
| Reference scenario | Takes into consideration scenarios published by various international organizations, including IPCC SSP 1-1.9 (countries adopt ambitious climate policies to achieve 1.5°C or lower and net zero CO2 emissions by 2050), IPCC SSP 3-7.0 (CO2 emissions will not begin to decline even in 2050, resulting in high temperatures, heavy rainfall, storms, and other impacts), IEA SDS (the Paris Agreement and other targets will be achieved through the development of energy policies and investments; many countries and companies will achieve 2050 net zero), and NGFS (Delayed Transition; due to the slow introduction of new climate policies and different levels of action in each country, emissions will not begin to decline until 2030, and then move toward net zero), as well as announcements by the Japanese government (NDC) and related councils, etc., such as “Reduce Japan’s greenhouse gas emissions by 46% from the 2013 levels by 2030, with net zero emissions by 2050,” “Reduce greenhouse gas emissions in the residential sector by 66% from the 2013 levels by 2030,” “Ensure energy-efficiency at the level of the 20% standard for new houses built in FY2030 and beyond,” and “By 2050, population in the whole housing stock that can contribute to carbon neutrality.”
| Subject companies and businesses | All existing businesses of the Sekisui House Group company (including the entire upstream and downstream value chain). |
| Qualitative/quantitative | Mainly a qualitative analysis of all existing businesses of the Sekisui House Group. Quantitative estimates of financial impact amounts for particularly important opportunities and risks. |
| Impact of Japanese market size | The Sekisui House Group generates most of its sales in the Japanese market (about 85% of actual sales from February 1, 2021 to January 31, 2022). The Japanese housing market is expected to contract gradually due to the shrinking population, declining births, and aging population. While this trend is by no means insignificant, it has not been considered in this analysis, as the focus is climate-change-related impacts. |

The scenario we are referring to is the 1.5°C scenario shown in Table 1. However, even if regulations are strengthened to achieve the 1.5°C scenario, it is possible that countries will not be aligned in their actions, resulting in a world as projected in the 4°C scenario, where climate change is even greater. For this reason, we must prepare for both scenarios simultaneously.

In FY2021, a new Japanese greenhouse gas emission reduction target of 46% compared to the 2013 levels by 2030 was set to achieve carbon neutrality, and based on this target, various medium-to-long-term approaches related to the housing industry were also set. For this reason, we have conducted a large-scale scenario analysis for all of our businesses and are reviewing our strategies. The potential financial impact of the major risks and opportunities identified through the scenario analysis, as well as our responses are shown on the next page.

The financial impact and assumed time period are defined as follows.

- **Financial impact**
  - Large: 20 billion yen or more; medium: 10 billion yen or more; small: less than 10 billion yen

- **Assumed time period / Short term: up to 3 years from the present; medium term: up to 2030; long term: up to 2050**
**Table 2. Major risks, potential financial impacts, and responses**

<td>Although the Company already has measures in place to decentralize the supply chain in anticipation of damage to supplier companies’ factories and transportation routes, and to prevent heat stroke at construction sites, continued consideration is needed, in anticipation of an increase in the scale and frequency of natural disasters.</td>
<td>Not calculated</td>
<td>Medium-term</td>
</tr>
</tbody>
</table>

### Other risks

Before purchasing land for resale, we use hazard maps to conduct an analysis of possible risks. When constructing buildings such as condominiums, we also refer to hazard maps during planning to minimize the risk of damage. However, the impact of climate change is growing year by year, and the scale and frequency of natural disasters may increase. Therefore, the Sekisui House Group will continue to study how to deal with it.

Confirmation of the resilience of the Sekisui House Group's existing strategies

As a result of the review, the Sekisui House Group's strategy has already begun to address decarbonization and extreme weather events in all of its business activities, and it has been determined that no fatal impacts are currently apparent, either in terms of transition risk to a decarbonized society or physical risk due to climate change.
Risk management

As part of the Group-wide risk management process, the Sekisui House Group conducts assessments to determine climate change-related risks and opportunities based on TCFD recommendations.

Risks and opportunities are identified for the entire Group, led by the principal department of each business, and the results are aggregated by the Environmental Subcommittee, which conducts a financial impact assessment. Major risks and opportunities that are identified based on this process are reviewed by the ESG Promotion Committee, a consultative body to the Board of Directors, before being reported to the Board of Directors, which considers risk mitigation, transfer, acceptance, and control, as required. Furthermore, the results are shared by the Risk Management Committee, and reviewed and managed within the Group’s overall risk management system.

Indicators and targets

In 2008, the Sekisui House Group declared its Vision 2050, which aims to achieve zero CO2 emissions from housing by 2050, and has already begun various initiatives to achieve a zero CO2 emission balance in all business activities, including the use of renewable energy.

As a milestone toward achieving this goal, we aim to reduce our own CO2 emissions in Scope 1 (direct emissions: own factories, offices, vehicles, etc.) and Scope 2 (indirect emissions: energy consumed by the Company, such as electricity), and Scope 3 (Category 11: use stage of housing supplied) by 50% and 45%, respectively, from the FY2013 levels by 2030, and this has been certified by SBT.1 In addition, we plan to revise Scope 1 and Scope 2 reductions upward to 75% in order to limit global warming to 1.5°C.

In addition, as an RE1002 member company, we will convert to renewable sources of electricity for our business operations, adopting targets of 50% by 2030 and 100% by 2040. Various concrete measures have been initiated to achieve these targets, and progress is currently on track, with targets expected to be achieved roughly 10 years ahead of schedule.

Future issues for the Sekisui House Group

As indicated thus far, the Sekisui House Group has already taken measures to address the anticipated risks from climate change, and does not expect any significant financial burden. However, in order to ensure that the Sekisui House Group continues to implement decarbonization management as it has in the past, we will continue to monitor the major risk factors with significant financial impact that have been identified in this analysis and strengthen the necessary initiatives, while further quantifying risks and improving the accuracy of the analysis. As for challenges going forward, we believe that the mission of the Sekisui House Group is to further quantify and improve the accuracy of risks related to newly consolidated Group companies, and to contribute to the transition to a sustainable society.

In addition, climate change involves many uncertainties, so we need to gather a broad range of intelligence from outside the Group. In order for the Sekisui House Group to demonstrate leadership in the international community, we will further focus on stakeholder engagement through participation in various domestic and international initiatives, including the United Nations Framework Convention on Climate Change (UNFCCC) and the Global Alliance for Buildings and Construction (GlobalABC), of which we are the only member in the Japanese private sector.
Biodiversity Conservation

1 Governance

Participating in conservation initiatives

We have been an early participant in the global movement for biodiversity conservation. At the 9th Conference of the Parties to the Convention on Biological Diversity (COP9) in 2008, we were one of the nine major Japanese companies to sign the Leadership Declaration of the Business and Biodiversity Initiative.1

As a founding member of this initiative, we agreed to the three objectives of the Convention on Biological Diversity (conservation of biodiversity, sustainable use of biodiversity components, and fair and equitable distribution of the benefits of genetic resources), and we continue to promote biodiversity conservation2 under this policy as a priority focus of our business operations.

These initiatives are led and promoted by the Environmental Subcommittee, in cooperation with each department as well as domestic and overseas Group companies, based on the ESG management promotion system. We also ensure that all employees understand and are familiar with these initiatives through progress reports and feedback on issues and proposals for improvement.

Biodiversity commitment

In our Sustainability Vision 2050 plan, we have set the goal, as a challenge for 2050, of maximizing ecosystem networks through business operations. We aim not only to achieve no net loss (to maintain the value of the ecosystem) but also become nature positive (to enhance the value of the ecosystem through our business operations). With this commitment, we remain focused on the *Gohon no Ki* Project, a landscaping and greening project that fully considers the ecosystem, as well as FairWood sustainable wood procurement.

The *Gohon no Ki* Project, an eco-friendly landscaping and greening project

As Japan’s largest landscaping company, planting one million trees nationwide annually, we are responsible as a house builder supplying many houses to conserve biodiversity through our housing products. Since 2001, we have been implementing the *Gohon no Ki* Project, a landscaping and greening project that takes the ecosystem into consideration.

The *Gohon no Ki* Project is based on the approach that “three trees are for birds, two trees are for butterflies, and all are local native tree species.” The *Gohon no Ki* Project proposes 288 local tree species beneficial to birds and butterflies for use as garden trees.

In addition to biodiversity conservation, we are making proposals that encompass benefits to living creatures that visit gardens and the effects of garden trees. One of the goals is to maintain and revive the ecosystem network (nature positive) by increasing the amount of high-quality green space in urban areas and by supporting the habitats and activities of fauna with residential gardens created under the *Gohon no Ki* Project. Ecosystem networks enrich the biodiversity of local regions in all countries, creating places where residents can enjoy wildlife and the richness of nature at the same time.

Due to the cooperation of many customers who have endorsed the *Gohon no Ki* Project, the cumulative number of plantings since the start of the project in 2001 reached 18.10 million.

2 Strategy

Eco-First Promise

Sekisui House was certified as an Eco-First Company by the Japanese Minister of the Environment in June 2008 for making three promises (Eco-First Promise)—global warming prevention, ecosystem preservation, and resource recycling. We have been conducting environmental activities with a view to fulfilling these promises. In FY2012 and FY2016, we updated our Eco-First Promise within the broad frameworks of the three promises while incorporating changes in the social environment and the progress in our initiatives. In 2020, we updated our commitments and are continuing to expand our efforts.

Urban Development Charter

In 2005, we developed the Urban Development Charter to fulfill our responsibility as a housing manufacturer for the future. This charter summarizes once again the range of expertise we have cultivated as part of our urban development initiatives that adhere to the concept of sustainability. Based on our four types of value (environmental, economic, social, and value for residents), we have adopted four perspectives: environmental management, economic management, town management, and lifestyle management. We are continuing to promote urban development, while considering our Basic Urban Development Policy and 24 specific guidelines.
Biodiversity Conservation

3 Risk Management

Exposure to biodiversity risks and biodiversity assessments

We get approximately 250,000 m³ of wood annually from building materials manufacturers. For this reason, we have positioned the impact on biodiversity in logging areas as an important risk for business continuity, and have declared the goal of zero deforestation to avoid this risk. Guided by this declaration, we conduct an annual survey of our major suppliers looking into the status of the wood supplied to us to determine if any risks exist. We use our own Wood Procurement Guidelines, which include biodiversity assessments. The survey results are disclosed in a report and managed as a KPI to minimize risks related to biodiversity conservation.

In addition, for buildings on land owned by us for business operations, such as prefabricated housing for sale, we acquire land—after confirming compliance with laws and regulations, including those related to biodiversity—from the land developers who are responsible for development. In addition, we avoid developing in areas in close proximity to critical biodiversity.

4 Indicators and Targets

Please see Section 7 for details.

5 Initiatives and Other Related Information

Urban greening

Big data on biodiversity has revealed the effectiveness of the Gohon no Ki Project, which focuses on local native tree species. We will propose better quality green spaces by quantitatively assessing biodiversity using big data and through quantitative assessments for cohesive green spaces in urban areas.

Evaluating effectiveness quantitatively by using big data on biodiversity

In 2019, to conduct a comprehensive evaluation of small green spaces scattered across Japan that could not previously be assessed, we started a joint verification—with the Kubota Laboratory in the Faculty of Science of Ryukyu University—to analyze the effectiveness of quantitative assessments of biodiversity conservation from a macro perspective. It became possible in 2021 to quantitatively express the effect of the Gohon no Ki Project on biodiversity after using the big data on biodiversity from Ryukyu University in addition to other data on the number, species, and location information of trees planted by the Company. Data on the effect included the number of bird and butterfly species that are being attracted to residential areas.

Results of big data analysis: Effect on birds

Gohon no Ki has the effect of attracting nearly twice as many bird species to residential areas.

Without the Gohon no Ki Project

Effects of the Gohon no Ki Project

Average of 9 species

Average of 18 species

Results of big data analysis: Effect on butterflies

Gohon no Ki has the effect of attracting nearly five times as many butterfly species to residential areas.

Without the Gohon no Ki Project

Effects of the Gohon no Ki Project

Average of 1.3 species

Average of 6.9 species

- When the Company implements the GoNoKi Project
- When the GoNoKi Project is not implemented

Urban biodiversity: Enrichment of lives achieved through the GoNoKi Project

Expectations for corporate green space and OEMC that can contribute to biodiversity

On the north side of the Umeda Sky Building in Kita-ku, Osaka, where the Company is headquartered, we prepared the Shin-Satoyama Garden covering 8,000 m². This garden was renovated in 2006 with more than 500 trees based on the principles of the GoNoKi Project. We planted native Japanese tree species and more than 200 species of shrubs and flowers to create thickets. In the belief that a variety of spatial shapes supports the richness of an ecosystem, we have essentially created a green space where many creatures can now thrive.

In 2013, we completed the “Wall of Hope,” a huge greening monument on the east side of Shin-Satoyama measuring 9 meters high and 78 meters long that was completed at the initiative of the renowned architect Tadao Ando. In order to function as a model for vertical spatial greening that is expanding in the city, we covered the green wall with more than 20,000 colorful plants of about 100 species, focusing mainly on the tree species selected for the GoNoKi Project. By systematically arranging plants with different flowering colors and colored leaves, we arranged it so that visitors could enjoy the varied appearance of the garden as it changes with the four seasons. The Shin-Satoyama project has become familiar to office workers as a place where one can experience the true value of this ecosystem.

Other effective area-based conservation measures (OECM) are the key to achieving the international pledge to protect 30% of the planet by 2030, now being considered a major objective of the post-2020 global biodiversity framework. Shin-Satoyama, which is based on the GoNoKi Project, is a good model for corporate green spaces with a high impact on biodiversity conservation.

Promoting greening and environmental conservation in condominiums for sale and urban development projects

In the condominium for sale segment, we are utilizing the principles of the GoNoKi Project for the exterior. Our GRANDE MAISON condominium brand is focused on greening; its business highlights the goal of increasing the abundance of greenery soothes the spirits of residents and enhances the value of the condominium.

In 2019, the EGOTANOMORI Project (Nakano-ku, Tokyo) received the MIT Minister’s Prize in the Category of Green Business Activities of the Green City Awards sponsored by the Organization for Landscape and Urban Infrastructure. The EGOTANOMORI Project has received numerous awards, as efforts to enhance the environment using greenery, improve the landscape, and revitalize local communities have received high praise.

Urban development under the concept of kein bika, or cityscapes that grow more attractive over time

Since 1977, we have been working on community developments under the names “Common Life” and “Common City.” Designed with an awareness of the connections between neighbors and communities, and with lavish shared plazas and streets as symbols, they offer a richer life and a townscape that will grow more attractive over the years under the concept of kein bika. This approach also leads to beautification and is highly appreciated by the local residents.

Since launching the GoNoKi Project in 2001, we have been promoting urban development that emphasizes the quality of greenery, keeping in mind the planting of native species in consideration of a healthy ecosystem. In 2005, we established the Urban Development Charter, which outlines our varied expertise such as the GoNoKi Project, which was cultivated as part of our urban development efforts with adherence to the concept of sustainability.

Skyrail Town Midorizaka, Hiroshima City

Photo from 1997 Photo from 2009
1 Governance

Under the ESG Promotion Committee, our Group set up a Resource Recycling Task Force within the ESG Management Promotion Headquarters to build and administer a system for resource recycling for the entire Group. To maintain advanced resource recycling procedures, we created the Sekisui House Zero Emissions system based on the Wide Area Certification System. We also set up our own facilities, called Resource Recycling Centers, to consolidate waste generated at construction sites and ensure reliable recycling. To support this system, we created a waste sorting guide for resource recycling as well as guidelines that set out the criteria for selecting recycling companies. We are distributing information on these measures to our employees and partner building contractors, and we have developed and operate our own waste collection and waste measurement systems. By doing this, we are centrally managing all processes from waste generation to recycling.

In addition to using recycling methods, we also coordinate related resource recycling activities that help develop a circular economy, including through our product development and manufacturing departments.

2 Strategy

Resource recycling guidelines

Our basic guideline is to sustain an advanced resource recycling system based on the Sekisui House Zero Emissions system.

Basic Policy for Zero Emissions

1. This system is designed to control waste generation throughout the entire supply of prefabricated housing by analyzing the state and nature of waste generation and continually providing information useful for reducing waste during design, production, and construction.

2. This system not only establishes standards for treatment consigned to others and ensures effective treatment contracting based on those standards, but the system must also be able to withstand future improvements in social standards.

   [Priority items]
   - Ensure effective recycling processes
   - Ensure traceability
   - Implement complete sorting of waste within the Company

3. The principle of operation follows the Wide Area Certification System as a basis for fulfilling the above norms.

Measures and commitments for resource use

The Group implements measures for resource use according to purpose.

1. Zero Emissions from waste generated at construction sites

   We are working to make effective use of recycled resources, with a focus on material recycling.

2. Measures to extend the service life of housing

   We have established a multifaceted system for improving durability, provided after-sales service according to the lifecycle of housing, and developed a remodeling business in order to ensure that houses and other buildings, which represent societal assets, are used for the longest possible time. In this way, we are contributing to the use of resources in existing buildings.

3. Commitment to using recycled resources

   We intend to realize a circular economy through advanced research and development on new building materials made from recycled raw materials.

Resource Recycling Diagram
Resource Creation Recycling

Measures and commitments for handling waste

• Controlling waste generation
  We have focused on the development of systems intended to control waste generation. We analyze the amount of resources invested in product supply as well as the status and nature of waste generated during the manufacturing and construction processes. We also continuously improve the system that provides information useful in reducing waste in the processes of design, production, and construction.

• Utilizing waste
  We will establish recycling standards for the waste we generate and ensure proper recycling in accordance with these standards. Moreover, we will continue to pursue recycling technologies that are economically feasible while further contributing to the emergence of a society committed to resource recycling. We will pursue these goals in collaboration with our partner companies including material manufacturers, production and construction companies, intermediate processing companies, and demolition companies.

3 Risk Management

Responding to resource recycling risks

When formulating the Sekisui House Zero Emissions system, the Group focused on building a system that takes into account certain risks in resource recycling, such as disguised recycling and illegal dumping. In addition to selecting recycling companies based on the guidelines from our selection criteria, we periodically inspect treatment centers, manage consignment contracts and waste management manifests every day through a centralized in-house management system, and we perform operational audits. Through these efforts, we are working to minimize (avoid) potential risks. A dedicated department at the head office is ready to take immediate action in the unlikely event that a potential violation of laws and regulations is detected.

4 Indicators and Targets

Zero Emissions in business units

• Boosting measures through the Wide Area Certification System
  House construction requires a significant input of resources. We are involved in the entire lifecycle of a house from producing material in our factories to demolition work, and from 2002 to 2007 we succeeded in achieving Zero Emissions* in four of our divisions (material production, new construction sites, after-sales maintenance, and construction sites for remodeling our own properties). Since then, we have maintained this achievement as we continue to operate with consideration for the quality of our recycling efforts. One reason we were able to lead the industry by achieving Zero Emissions over successive years was our use of the Wide Area Certification System, which is a special feature of Japan’s Wastes Disposal and Public Cleansing Act. In 2004, we were the first in the Japanese construction industry to gain this certification, and we have since managed to expand our Zero Emissions efforts through this system.

  In 2019, a joint application including all 17 Sekiwa Construction companies at the time was approved, and we are currently preparing a joint application with Sekisui House noie. Through these efforts, we intend to further expand and strengthen the resource recycling system of the entire Group, envisioning the completion of our recycling-focused business.

  In addition to targeting Zero Emissions backed by our long product service life, we are also working toward Zero Emissions in the real estate leasing business, with Sekisui House Real Estate Holdings, Ltd. playing a central role. In 2004, we were the first in the Japanese construction industry to gain this certification, and we have since managed to expand our Zero Emissions efforts through this system.

  The Prime Minister’s Prize for the 3Rs (Reduce, Reuse, and Recycle) Promotion Merit Awards for achieving Zero Emissions in four categories—factory, new construction, after-sales maintenance, and remodeling.

  The national launch of next-generation Zero Emissions system incorporating IC tags at new construction sites, the first in Japan

  We updated our unique Electronic Management System, incorporating IC tags at new construction sites, the first in Japan

  A joint application was accepted for Wide Area Certification by Sekisui House and all 17 Sekiwa Construction at the time, including new houses built by Sekiwa Construction.
**Resource Recycling**

- **Our Recycling Centers : The heart of our Zero Emissions initiative at new construction sites**

One of the unique characteristics of our waste collection system in the Sekisui House Zero Emissions System, under the Wide Area Certification System, is our in-house facilities called Resource Recycling Centers. These facilities, which have been in operation at our production facilities across Japan since 2003, serve as the heart of our Zero Emissions efforts at new construction sites. These centers manage a number of processes, from allocating waste collection requirements, to sorting and processing waste, ensuring that it is recycled as efficiently as possible.

All our waste generated during new construction is first sorted into 27 categories at the site, then re-sorted into 60 to 80 categories at our 21 Recycling Centers nationwide. All this waste is eventually recycled by our own hand. By disassembling components into materials of a single type and reducing their volume through compression and heating, we can put these materials into a recycling stream handled partly by external contractors.

Regarding plastic, which has become a particular problem in recent years, we improve the quality of recycling. In light of this trend, we have been improving our waste measurement system to meet the exact needs of recyclers, we are contributing to a higher quality of recycling.

- **Our waste measurement system**

Securing traceability related to the proper disposal of construction waste is of the utmost importance not only to demonstrate responsibility for proper treatment and recycling of waste, but also for promoting recycling business models such as streamlined construction. We have been proactive in introducing information and communications technology, starting with the trial of a waste measurement system using IC tags in 2007.

In 2017, we updated our proprietary Electronic Processing System for waste collection into a cloud-based system in order to respond flexibly to requests for enhancement of electronic system functions for waste management. We now operate a waste measurement system that utilizes current QR codes. This is an innovative system that accurately monitors the situation at the time of disposal, aggregates and analyzes data from each building, and monitors the total disposal amount and the disposal amount by type of waste in real time.

By feeding back the detailed data analyzed in this way for product development, material design, production processes, and construction processes and the like, it is possible to promote the more effective use of resources. Since 2019, the utilization rate of the waste measurement system has been 100% on a business site basis.

Recycling initiatives

We continue to reuse waste generated in-house as a raw material as building materials in our buildings. For example, we manufacture house construction materials from plastics recovered from packaging materials and an acoustic insulation material from crushed scrap roof tiles as sound deadening materials for floors. In addition, at the manufacturing and processing facilities located at two recycling centers in Japan, scrap plasterboard collected from new house construction sites and eggshells from food processing factories are mixed and crushed into a powder. This produces Platama Powder, an athletic field marking chalk, which we have manufactured and sold since 2010. This initiative has enabled us to establish a new commercial distribution channel and a system for continual recycling by regularly purchasing eggshells for value, previously thrown away as food waste.
Water

1 Governance

The water consumption for the entire Group, including production facilities and offices, is monitored and used as base data for the effective use of water resources and for controlling and reducing water use. The total water withdrawal in FY2021, including clean water, decreased by 0.6% compared with the previous fiscal year.

In particular, we established a management system under ISO 14001, international standard for environmental management systems, at our factories and are promoting water-related initiatives through production facilities.

2 Strategy

Wastewater from all five factories in Japan is discharged into public sewers and rivers, after being purified at the effluent treatment plant in the factory, and then managed according to voluntary standards that are stricter than the Water Pollution Control Law and ordinances. In this way, we are striving to prevent water pollution and protect the environment for water quality in the areas surrounding our factories.

3 Risk Management

We share the results of wastewater quality assessments at all five factories in Japan. In the unlikely event that our voluntary standards are exceeded, we share the information on water pollution risk at a managers’ meeting to help prevent any recurrence.

4 Indicators and Targets

Targets for reducing water consumption and water withdrawal in water-stressed areas

We will work to reduce water consumption and address water risks in the watersheds at our production facilities with relatively high water consumption. In our factories, we will determine water risks using water risk assessment tools and other equipment, then collaborate with local stakeholders to reduce water withdrawal according to regional characteristics.

Note: Regulatory value under the Water Pollution Control Law (However, our Hyogo Factory is exempt from the law.)
5 Initiatives and Other Related Information

Water resource conservation initiatives

The many offices, factories, and construction sites of our Group consume water resources. At these worksites, we are striving to use our water resources efficiently through water conservation measures. The total water withdrawal in 2021 was 1,076,000 m³ (a reduction of 0.6% from the previous year). The amount of wastewater discharged was 774,000 m³ (a reduction of 1.8% from the previous year).

Initiatives at domestic production facilities

Our domestic production facilities (Tohoku Factory, Kanto Factory, Shizuoka Factory, Hyogo Factory and Yamaguchi Factory) use groundwater in addition to the municipal water supply and industrial water in the painting process of steel frame members and the manufacturing and painting process for exterior walls used in residential construction. We continue to work on water quality management of wastewater and efficient use of water resources in these processes. Specifically, we are taking action to reduce water consumption by reusing wastewater after washing pallets for transportation and reusing treated water for cleaning.

In FY2021, the total amount of industrial water, groundwater, and clean water (intake water) used in the manufacturing processes at our production facilities in Japan was 612,000 m³ (a reduction of 0.7% from the previous year). The amount of wastewater was 311,000 m³ (a reduction of 12.1% from the previous year).

External initiative to reduce water use

In our newly built houses, we install the latest equipment for saving water (faucets, showers, flush toilets, etc.) supplied by housing equipment manufacturers as standard equipment in the majority of houses since before 2020. In this way, we are reducing water consumption in houses. In Japan, where we build most of our houses, water meters are essential for supplying water.

Collaboration with stakeholders in water-stressed areas

The Shizuoka Factory uses water from the Oi River system, and is using water for industrial use based on requests from the local business association, which has helped to reduce water consumption.

In addition, for homebuyers (residents), who are very important to us, we install as standard highly efficient water appliances such as water-saving toilets, faucets, and showers. We are also working to update and promote the use of water-saving appliances in existing houses through our remodeling business.

Waterway Point

Along a canal and featuring a beautifully landscaped promenade and large shopping mall, Waterway Point is a commercial center that we developed in Singapore with a joint venture partner. We upgraded the facade lighting and sanitation system to conserve energy and water. In addition, following our certification of registration with the ISO 14001 international standard for environmental management systems, in 2021 we also obtained certification of registration for ISO 50001, the standard for energy management systems. To meet these international standards, we are promoting the construction of environmental and energy management systems as we focus on targeting continual improvements.

The Waterway Point shopping mall and the Watertown condominiums that were offered for sale have earned a Gold Plus rating under Singapore’s Green Mark* certification system.

* An environmental performance evaluation that defines building specifications and performance
Supply Chain Management

1. Governance

We are committed to CSR-based procurement to fulfill our social responsibility under our basic purchasing policy for the best quality, robust delivery, and reasonable price, plus ESG.

2. Strategy

FairWood procurement and Wood Procurement Guidelines

FairWood is defined as wood that is not only legal, but also contributes to sustainability and local development. We have declared FairWood procurement as a priority in our Wood Procurement Guidelines, and we are working to improve our level of procurement, while striving to engage with FoE Japan and other international environmental NGOs and industry organizations. For example, we are constantly working with environmental NGOs to obtain the latest information on high-risk areas and update our risk assessment methods.

The objective of FairWood procurement is to secure a stable supply of sustainable and renewable resources for the Company. Another objective is to achieve a positive impact through sustainable forestry management that goes beyond avoiding illegal logging by continually working on our supply chain, as one of Japan’s leading wood consumers. This is also in line with our biodiversity conservation challenge goal of “maximizing ecosystem networks through our business.”

Evaluation based on wood procurement survey

We are always mindful of diversity, so when procuring wood, we consider the HCVF designation and the IUCN Red List of endangered tree species, and do not use any materials originating from regions that correspond to these species. We also consider the social issues in each country as required by the ISO 26000 international standard for social responsibility.

Specifically, detailed information on the origin, including the volume, species, and growing district of procured wood purchased from 64 major timber suppliers is evaluated using the Wood Procurement Guidelines, and ranked on a four-point scale: S, A, B, and C.

Based on these evaluations, we are encouraging suppliers to reduce the supply ratio of low-ranked wood and increase the supply of high-ranked wood.

The ratio of Rank S and Rank A wood, which represent our management targets, has been gradually increasing from 47% before the guidelines were implemented in FY2006. In FY2021, using wood ranked A and S reached 97.2%, which exceeded our target.

We view the forest certification system as an effective third-party certification. On the other hand, we do not see our ranking as absolute because we believe it is necessary to consider the producers working on community forestry and small farmers who cannot obtain certification for economic reasons. The utilization rate of certified materials is managed as a reference value, and 64% of all our wooden building materials, including interior equipment, and 93% of our structural materials alone are certified materials such as FSC/PEFC (including certified processed materials). The ratio of Rank S and Rank A wood, which represent our management targets, has been gradually increasing from 47% before the guidelines were implemented in FY2006. In FY2021, using wood ranked A and S reached 97.2%, which exceeded our target.

We are always mindful of diversity, so when procuring wood, we consider the HCVF designation and the IUCN Red List of endangered tree species, and do not use any materials originating from regions that correspond to these species. We also consider the social issues in each country as required by the ISO 26000 international standard for social responsibility.

Domestic wood initiatives at Sekisui House

Looking at the forest industry in Japan, while many forests are entering a period of full-scale use, they are not being replanted for the next generation for a number of reasons, and are not being fully utilized.

To revitalize the domestic forest industry, we believe it is necessary to achieve the seemingly contradictory goals of increasing demand to promote the renewal of forests for the next generation and branding to create added value. Therefore, we are developing the use of domestic timber, mainly for the structural materials used in our SHAWOOD wooden-frame houses.

We do not simply use domestic timber, but also develop it as a regional brand. By adopting materials from the regions where our customers live, we are contributing to local production for local consumption and the revitalization of the regional economy.

Currently, we are developing cedar, cypress, and larch products under 18 brands in 17 regions nationwide. These products have grown to a point where SHAWOOD—the cumulative number of these buildings has exceeded 6,500—has become a topic of conversation.

In response to the wood shock that hit the world in 2021, we took full advantage of the domestic timber supply network that we have cultivated to mass produce laminated beams made of cypress. The results of these efforts include using multiple procurement routes for key parts to fulfill our supply responsibilities and to put a system in place that prevents delays when executing our business operations. Another result is that we were able to demonstrate our approach to providing a solution to a social problem by viewing the wood shock not only as a supply problem for the Company, but as an opportunity to create demand for domestic timber.
Supply Chain Management

3. Risk Management

Practicing due diligence in procurement

To us, due diligence* is the process of securing sustainable timber that supports the future of our business, and we implement sustainable wood procurement through strict due diligence practices.

Due Diligence Practices

Risk assessment

Information gathering

1. Initial risk assessment
   - Washington Convention
   - IUCN Red List, etc.

2. Detailed risk assessment
   - Extent of illegal logging
   - Corruption index, etc.

Risk mitigation measures

Due Diligence Practices

Commitment to zero deforestation/no net deforestation

After adopting the New York Declaration on Forests in 2014, 86% of the world's forested countries and regions agreed to zero deforestation at COP26 in 2021, recognizing this as an urgent global issue.

The zero deforestation concept is in line with our FairWood procurement policy, and we have declared zero deforestation for all Group companies in our plan Sustainability Vision 2050. The Group’s goal for the future is zero deforestation, including suppliers and secondary suppliers.

We are currently in the process of revising our Wood Procurement Guidelines and procurement policies to ensure full implementation and clear communication with suppliers, and to incorporate our commitments to suppliers.

Biodiversity commitment

The following commitments are included in our Wood Procurement Guidelines and share with our suppliers and secondary suppliers.

8. Source wood products from domestic forests where well-planned forest management is in place to conserve ecosystems.

9. Source wood products from plantation forests that are managed so as to promote conservation and ecosystem development.

Risk assessment of environmental issues

Managing the environmental impact of suppliers

Since 2021, with the aim of responding promptly to serious risks, suppliers have been asked to report violations of any laws or regulations, in addition to answering the questions in their self-assessment of CSR evaluations. There were no reports in 2021.

Risk assessment of environmental issues

For existing suppliers whose CSR evaluation results reveal environmental risks, we conduct due diligence by monitoring them using onsite interviews, providing advice on evaluation standards and how to meet those standards, and confirming the current state of compliance.

In the unlikely event that a serious risk is discovered, we work with the people concerned to determine the proper remedial action and reinforce measures that could include cutting back on transactions with them, depending on the score in the supplier assessment.

5 Activities and Other Related Information

Adoption of fast-growing hardwoods

While Southeast Asia is facing serious problems with deforestation, sustainable forestry is spreading for the fast-growing hardwoods (Acacia falcata, etc.) that have been planted since the 1990s.

The Company believes that using wood from these trees will contribute to less deforestation and the sustainable management of fast-growing tree plantations, so we are promoting a change away from natural hardwoods.

Beginning in 2019, we switched from lauan plywood to falcata plywood for foundations, and in 2021, we switched to acacia-derived material for part of medium-density fiberboard from mixed light hardwood.

To popularize this change in the future, we plan to raise awareness about sustainable wood procurement Company-wide, considering that it is necessary to have an understanding at the manufacturing site where processing and construction are actually performed and at the construction site.

Reduction of CO2 emissions at the components and raw materials procurement stages

To reduce lifecycle CO2 emissions from homes, the Company has been working on energy-efficient housing, including a shift to ZEH (net zero energy houses).

However, because homebuilders cannot do this alone, we are promoting initiatives throughout the entire supply chain. CO2 emissions from procurement of components and raw materials in our supply chain accounted for 35% of our total emissions in FY2021. This represented the second largest percentage after 53% for CO2 emissions during the residential stage of supplied housing.

For this reason, in October 2020 we surveyed our suppliers by questionnaire to determine the state of their initiatives to reduce CO2 emissions. Based on the questionnaire results, 135 suppliers attended a seminar we held in February 2021. By doing this, we positioned 2021 as the kick off year for reducing CO2 emissions in our supply chain.

Further, in April and October 2021, we held seminars for 61, then 242 companies, to raise awareness of the need to acquire SBT certification. As well as keynote speeches by SBT governing bodies, the major suppliers as well as small- and medium-sized suppliers presented case studies for acquiring SBT certification. Not only were good examples presented for how even small companies can obtain SBT certification, but a consultation service was also set up within the Company for small- and medium-sized suppliers. Through this service, we provide specific advice as well as answers to individual questions.

As of 2020, our major suppliers had an SBT target-setting rate of 18.6%, which increased to 22% in FY2021. We have set the goal of raising this target to 80% by 2030. By promoting effective CO2 reduction across the supply chain in cooperation with our suppliers, we will contribute to the realization of a carbon-free future.

6. Certification of greenhouse gas reduction plans based on scientific data
Other Environmental Management

1. Governance

Acquiring certification of ISO 14001 registration

As part of their production process management, five domestic factories that manufacture and ship industrialized housing materials have acquired ISO 14001 certification: the Tohoku, Kanto, Shizuoka, Hyogo, and Yamaguchi Factories, and one overseas factory, the Ingleburn Manufacturing and Quality Control Centre in Australia. ISO 14001 is the international standard for environmental management systems. We are continuing the operation of these systems. The ratio of certified production facilities is 100%.

Initiatives for effective processing of hazardous waste

Approximately 95% of the hazardous waste that we handle is asbestos (Levels 1 and 2) from existing structures, which is strictly treated as specially controlled industrial waste. The others are mainly residual substances left over from the use of chemicals from raw materials handled in domestic production facilities used to fulfill the need for long-term durability of housing at a high level.

For specially controlled industrial waste generated at domestic factories, we comply with the Waste Management Law, as well as all related laws and regulations (such as the Ordinance on Prevention of Hazards due to Specified Chemical Substances) and industry guidelines. Procedures are also in place to identify potential accidents and emergencies that could lead to significant environmental impact, to prevent any adverse environmental impact, or to mitigate any actions that minimize the escalation of impact. At the same time, possible responses are maintained for effectiveness through annual testing and internal audits of accident and emergency preparedness and response.

2. Strategy

Prevention of contamination by hazardous chemicals (Chemical Substance Guidelines)

Sekisui House aims to minimize the risk of using hazardous chemicals by applying EVABAT (economically viable application of the best available technology) throughout the lifecycle of a house. In 2007, we created our own Chemical Substance Guidelines, which employ a risk management perspective. We also reviewed and revised the guidelines in accordance with laws and regulations and new information regarding the use of chemical substances. At the same time, we comply with laws and regulations and promote appropriate responses to chemical substances based on guidelines established by the national government, local governments, industry associations, and others.

Hazardous waste policy, etc.

We comply with all laws and regulations on hazardous waste and promote effective responses to hazardous waste based on guidelines from the national government, local governments, industry associations, and other organizations.

We will also indefinitely maintain the status of zero discharge of hazardous waste into the natural environment.

Commitment to reducing environmental impact

Under the leadership of the Environmental Subcommittee, we consider action policies for societal ideals, such as a decarbonized society, or a society where people and nature coexist, and a circular economy. We implement initiatives that keep reducing the environmental impact of our business activities. These actions are adopted by the whole Group after receiving approval from the ESG Promotion Committee. Action policy details are regularly reported to the Board of Directors.

In addition, we have set goals for reducing our environmental impact in response to new issues and are working to achieve them.

3. Risk Management

Responding to risks related to soil and groundwater pollution

We will continue to focus on minimizing risks, including prevention of secondary pollution, by conducting surveys and implementing countermeasures not only for our own lands but also for land for which we are engaged in transactions.

Prior to engaging in land purchase or sales contracts, we implement risk identification related to soil and groundwater contamination by employing a pre-screening system using our own soil contamination checklist (including a survey on history of land use transition; surveys of topography, geology and groundwater; a data survey on surrounding environmental measurements by local governments; a site inspection survey; legal compliance; and other investigations).

In the case of land that may contain contaminated soil, such as factory sites, sellers are increasingly conducting their own voluntary surveys. When purchasing land, a specialized department of the Company scrutinizes all survey reports. If a problem arises regarding the completeness of the information, we ask the seller to conduct additional surveys.

Properties that are determined to be at risk of contamination are analyzed by designated research institutions to evaluate the validity of the transaction. In addition, where soil contamination has been discovered as a result of the investigation, land with minor concentrations and distributions of contamination (land contaminated mainly with heavy metals that can be guaranteed as amenable to complete remediation) undergoes remediation by soil replacement before the sale. When this occurs, we explain the measures that have been taken as a material matter.

At domestic factories on our own sites where contamination could be a risk if no action is taken, we have set up measures for investigation, prevention, daily management, and emergency response (prevention and mitigation of contamination), and are implementing contamination risk management.
Other Environmental Management

Initiatives to reduce hazardous waste

We are constantly considering how to use the best economically feasible technologies. One example of reducing waste: electro deposition coating materials used for antitrust treatment on steel frames contained a very small amount of lead, but since January 2003, we have switched to lead-free paints, resulting in zero residual materials from lead-based paints.

Release of hazardous waste

With regard to the release of hazardous wastes, we monitor the amount of “specially controlled industrial waste” we release under the Waste Management Law. In addition to the hazardous waste regulated by the Basel Convention, such as waste PCBs and products containing PCB pollutants, which we are disposing of sequentially toward the statutory disposal deadline, we properly handle and dispose of all other specially controlled industrial wastes (including flammable waste oil, waste acids, and scatterable asbestos) that we generate.

[Construction waste]

In 2004, we acquired the first Wide Area Certification in the construction industry. We have achieved and maintained Zero Emissions by collecting 27 categories of waste sorted at our construction sites, re-sorting them into up to 60 categories at our Recycling Centers, and recycling the waste at a 100% rate.

In 2007, we received the first “Specially Controlled Industrial Waste” certification from the Japan Manufacturers Association. In 2016, we acquired the Wide Area Certification for sustainable construction. Our targets are: 6.5% of materials used in construction are recycled, and 45% of waste is reused (as of March 2018).

With regard to the release of hazardous wastes, we monitor the amount of “specially controlled industrial waste” we release under the Waste Management Law. In addition to the hazardous waste regulated by the Basel Convention, such as waste PCBs and products containing PCB pollutants, which we are disposing of sequentially toward the statutory disposal deadline, we properly handle and dispose of all other specially controlled industrial wastes (including flammable waste oil, waste acids, and scatterable asbestos) that we generate.

We are constantly considering how to use the best economically feasible technologies.
Other Environmental Management

Assessment of compliance with environmental laws and regulations

We have a system to ensure that a report is submitted to the head office if any violations of environmental laws and regulations occur, including potential soil, groundwater, and air pollution. (FY)

Ratio of buildings with green certification

The green certification ratio of Sekisui House’s real estate portfolio is zero. However, the Company has received certification for CASBEE for Real Estate (Rank S) for Akasaka Garden City, which is included in the Company’s portfolio (ratio of right of site: 34.55% of 662,768/1,000,000 (approximately 66.3%)).

5 Initiatives and Related Information

Use of lifecycle analysis during product or system design

For some time, we have calculated CO₂ emissions at every stage, from production to demolition, using the Life Cycle Assessment (LCA)* method, and found and understood that the residential stage is responsible for the largest portion of CO₂ emissions. For this reason, we have worked hard to promote eco-friendly homes that reduce emissions. For contributing to the realization of a decarbonized society, we recognize that the most important environmental factor is reducing the environmental impact at the residential stage, so we continue to work on the evolution of our products.

In addition, Group companies specializing in remodeling existing products are working to reduce CO₂ emissions from the existing housing stock and are making steady progress toward a decarbonized society by 2050. Further, by calculating CO₂ emissions for Scope 1, 2, and 3, we are monitoring CO₂ emissions during product manufacturing, as well as at every upstream stage, including materials procurement, and downstream, including during occupancy, and we are using this information to devise ways to reduce CO₂ emissions over the entire lifecycle of the product.

Green procurement

We are applying green procurement, which prioritizes the purchase of environment-friendly products, and we purchase stationery and other office products used by our business offices across Japan that follow our Green Procurement Guidelines. In FY2021, our green purchasing rate was 91.2%, and our recycled paper rate was 99.9%.

By gathering, compiling, and visualizing data on the amount of paper used in the office, we are raising awareness of the need to reduce the amount of paper we consume. In collaboration with Sekisui House Umeda Operation Co., Ltd., we supplied an eco-friendly 100% recycled paper with high whiteness for our operations in Japan (the standard for the Green Purchasing Law is 70% recycled paper content). We supply this paper to offices, including Group companies, as our own original recycled paper product.

In FY2021, the Company’s total paper consumption was 668 tonnes, representing a 3.5% decrease year-on-year, due in part to the increased number of employees telecommuting from home in an effort to minimize the spread of the COVID-19 infections. In addition, our paperless initiative further progressed, with annual paper consumption per employee totaling 44.5 kilograms, down 3.5% from the preceding year.

1 Governance

Even after handing over a house to a customer, we continue to work to further improve customer satisfaction, based on our customer satisfaction approach of always being there for our customers and continuing to look after their homes throughout their lives. In addition, we have roughly 100 Customer Service Centers (30 offices) nationwide, which have been established to provide customer support in cooperation with our research laboratories and head office divisions.

In August 2020, we opened a Customer Service Center Owner Desk and established a system to accept customer inquiries 24 hours a day, 7 days a week. To strengthen our responsiveness, we also started operating a system for handling inquiries that utilizes a chatbot and other automated communication tools. We intend to continue enhancing our response to inquiries via social media, interactive apps, and other channels, and aim to develop an automated, knowledge-based system that uses AI to create a database of sample answers.

In addition, our Customer Service Centers play a central role in periodic inspections and maintenance of dwellings after handing them over.

2 Strategy

We are contributing to the formation of a stock-oriented and sustainable society, through a system that allows high-quality housing to be passed on to the next generation as an asset of society, rather than repeating the process of scrap-and-build. In addition, our efforts to protect the value of buildings include establishing relationships with new customers after a change in occupants, so that quality housing can continue to be used.

To realize our global vision to make home the happiest place in the world, our Customer Service Centers, which are always open to our customers, must continue to provide the best service. We are expediting large-scale upgrades to our support operations so that all services are available to all customers.

3 Risk Management

Quality improvement (a system for preventing flaws and recurrences and creation of a database for complaints)

To supply houses to homeowners in which they can live safely with peace of mind and enjoy good health and comfort, we constantly strive to improve quality, and have set up a system for preventing flaws and ensuring that they do not recur. In order to improve and enhance the quality of our housing, we place great importance on customer satisfaction surveys, and analyze the real voices of our customers that we receive at our Customer Service Centers and consultation desks. We conduct surveys on services and products based on homeowner feedback, then analyze the results and share them with the relevant departments. To date, improvements have been made to reflect customer satisfaction surveys, and the real voices of our customers that we receive at our Customer Service Centers and consultation desks. We conduct surveys on services and products based on homeowner feedback, then analyze the results and share them with the relevant departments. To date, improvements have been made to reflect customer satisfaction surveys, and the real voices of our customers that we receive at our Customer Service Centers and consultation desks.

Improving customer service through the operation of an Owner Desk

We set up the Owner Desk to provide consistent customer service, which had not always been uniform because of the varying responses of individual staff members providing service. In addition, we structured a system to convert contact details into data managed as a corporate asset, and we analyze the collected data to improve the quality of service and minimize risk to customer satisfaction.

5 Activities and Other Related Information

Certified as Long-Life Quality Housing

The average lifespan of houses in Japan is said to be about 30 years. To make houses that last longer is the key to effectively utilizing resources and improving asset value.

Under the Act for the Promotion of Long-Life Quality Housing that went into effect in June 2009, the Japanese government established the Long-Life Quality Housing Certification Program, which aims to build up a stock of high-quality, long-term housing. Houses that are built according to set standards for structure and facilities are certified as “Long-Life Quality Housing” and various tax benefits apply. In FY2021, 93.4% of the homes we built were certified as “Long-Life Quality Housing” and that percentage is on the rise.

We also operate le-Log, a regularly updated database of historical data about each residence, ranging from such basic building information as the homeowner’s information to the design plans, inspection results, and repair records. Homeowners can use the le-Log database in managing maintenance or renovations of their home.

Sekisui House also offers an initial 30-year warranty program (for contracts signed on or after April 1, 2018) that covers the structural framing and any structure and facilities (“infill”) are appraised separately by years of depreciation, and the value of the building and the land are indicated separately in this proprietary circulation system. Each house supplied by member companies must fulfill three requirements to qualify: Has a database of residential data; has been on a 50-year-plus maintenance program; and has seismic resistance that exceeds recent standards.

Promotion of the SumStock quality housing stock system

SumStock is a circulation system for high-quality existing housing stock. It is run by the Provision of Quality Housing Stock Association, a general incorporated association founded in 2008 that comprises 10 major housing manufacturers including Sekisui House, and is chaired by Yosuke Horiuchi, Sekisui House’s current Representative Director of the Board, Vice Chairman and Executive Officer. The circulation system is an integrated system for members that covers all steps from value appraisal and certification through to resale. Its activities are aimed at increasing quality housing stock and invigorating the market.

A house’s basic structure (“skeleton”) and its interior furnishings and facilities (“infill”) are appraised separately by years of depreciation, and the value of the building and the land are indicated separately in this proprietary circulation system. Each house supplied by member companies must fulfill three requirements to qualify: Has a database of residential data; has been on a 50-year-plus maintenance program; and has seismic resistance that exceeds recent standards.

System for SumStock through Collaboration within the Group

Our Customer Service Centers and our Group companies, Sekisui House Remodeling and Sekisui House Real Estate, are working together to promote SumStock.

Also, using the data accumulated in le-Log, our proprietary housing history database, homeowners are able to circulate their home as a high-quality house. In the Fifth Mid-term Management Plan (FY2020–FY2022), which began in FY2021, the SumStock brand is being solidified, and in addition to the conventional goals of increasing volume and brand recognition, we are working to further improve quality and make social contributions, by promoting the distribution of high-quality existing homes to achieve carbon neutrality and other goals.

Customer satisfaction surveys

Sekisui House conducts customer satisfaction surveys to find out how homeowners rate the housing products and services we provide. We ask customers of detached houses to complete a questionnaire on the homebuilding process. A pre-construction letter of inquiry gives us the chance to allay anxieties by clarifying any unresolved matters listed, to proceed smoothly through to the post-construction phase. A questionnaire upon moving in allows customers to rate their satisfaction level at each person in charge, and different phases of the process, from preliminary discussions to the handing over of the house. A questionnaire one year after moving in allows customers to rate their satisfaction level at each person in charge, and different phases of the process, from preliminary discussions to the handing over of the house. A questionnaire one year after moving in allows customers to rate their satisfaction level at each person in charge, and different phases of the process, from preliminary discussions to the handing over of the house. A questionnaire one year after moving in allows customers to rate their satisfaction level at each person in charge, and different phases of the process, from preliminary discussions to the handing over of the house.

Since August 2012, customers have been able to answer questionnaires online at the homeowner member site, Net Owner’s Club. The improved convenience has seen more customers use the online system year by year. At present, more than 60% of detached house customers respond to the questionnaire online.

The collated and analyzed questionnaire results are communicated to the relevant departments, helping to improve daily operations, expand services, develop new components and products, and improve design and construction.
Supply Chain Management

PDCA practice for CSR procurement

We are committed to CSR procurement, based on a policy for finding the best quality, robust delivery, and reasonable price plus ESG.

Upon signing the United Nations Global Compact in 2018, we joined the supply chain subcommittee of the Global Compact Network Japan (GCNJ). We established the CSR Procurement Guidelines for our suppliers, which are compliant with the GCNJ's (self-assessment questionnaire) (SAQ). Since that time, we have asked suppliers to submit a signed agreement to confirm their understanding and compliance with the purpose and content of the guidelines, as well as cooperation with periodic checks or audits regarding their efforts, and we explain the significance and importance of CSR procurement to our suppliers at our annual action policy briefings held each February. In addition, at the end of each year, we conduct a CSR evaluation using a self-assessment check sheet based on the GCNJ's SAQ, in order to confirm compliance with the guidelines. By implementing the PDCA cycle for CSR procurement, we are raising awareness of social responsibility among our suppliers and deepening CSR procurement.

C Reasonable price

Promote supply chain resilience, ensure stable delivery, and prepare for delivery constraint risks.

In the CSR evaluation, the suppliers themselves are asked to evaluate their own initiatives from five perspectives: legal awareness, policies, systems and responsibility, verifying initiative outcomes, and corrections. The results are scored and evaluated. When commissioning a company as a new supplier, we perform a protocol-based evaluation and factory inspections for suitability from the standpoint of ESG principles. In addition, we require a signed agreement confirming an understanding of the CSR procurement guidelines before any transactions are conducted.

Guidelines and other regulations are posted so that members of our procurement department can easily refer to them. In addition, the department regularly holds seminars to keep everyone up to date on laws and social issues.

2 Strategy

CSR Procurement Guidelines

In 2018, we established the CSR Procurement Guidelines for our suppliers, in compliance with the GCNJ's SAQ, with the aim of realizing a sustainable society that includes the supply chain.

Supply chain policy on social issues

We recognize “human rights and labor” as one of the most important social issues in our supply chain.

The Sekisui House Group Human Rights Policy was set up in April 2020 and applies to all officers and employees of the Sekisui House Group. We also expect our business partners, including partner building constructors and suppliers, to understand and support this policy. The Sekisui House Group Human Rights Policy is also presented on the online information-sharing platform we maintain with our suppliers and we encourage them to comply with the policy.

The CSR Procurement Guidelines prohibit discrimination based on nationality or race, inhumane treatment, forced or compulsory labor and child labor, and require appropriate management of employee health and safety. We obtain signed agreements to adhere to the guidelines from our suppliers.

In order to promote respect for human rights in the supply chain, it is essential to expand the circle of encouragement from our suppliers to their suppliers. Therefore, in February 2022, we held a study session with external lecturers. Approximately 150 suppliers participated in the session to raise awareness and acquire basic knowledge.

We will continue our efforts to promote respect for human rights in our supply chain.

3 Risk Management

Supplier monitoring

In the event that risks are found in the results of the CSR evaluations of existing suppliers in areas such as the environment and human rights, we conduct monitoring by visiting the individual suppliers as suppliers to be monitored, provide advice on the evaluation criteria and achievement levels, and confirm their actual status by conducting due diligence.

As of the end of 2021, we conducted CSR evaluations of 150 suppliers, and determined that six suppliers should be closely monitored in terms of human rights, four suppliers in terms of labor, and five suppliers in terms of the supply chain, for a total of six suppliers (some suppliers had overlapping concerns). We are monitoring each company and encouraging them to make improvements.
Supply Chain Management

In serious cases we work with the department concerned to determine the proper action to take, and stipulate measures which might include cutting back on transactions, depending on the score in the supplier assessment.

Further, as a construction company, we consume a large volume of lumber. For this reason, we recognize the need for especially strict lumber procurement and we check due diligence annually by survey, targeting 60 or so major building material suppliers. We conducted a survey of 64 of these companies in FY2021.

When necessary, we conduct on-site inspections in Japan and overseas, including visits to logging areas at the most upstream portion of the supply chain. However, due to the COVID-19 pandemic, we were unable to conduct such inspections in FY2021.

Risk assessment of social issues

Since FY2021, we have been requesting suppliers to report violations of various laws and regulations, in addition to answering each question in the CSR evaluation. This supplements the results of the CSR evaluation, and allows us to identify high-risk suppliers who may be in violation of compliance, and take prompt action.

In FY2021, there were zero reported cases, and no high-risk suppliers were identified.

Enhancing sustainable procurement

• Conducting annual action policy briefings for suppliers

We hold an annual action policy briefing for our suppliers to ensure the best quality, robust delivery, and reasonable price, and to safeguard ESG for procurement. The purpose of the briefing is to deepen the understanding of suppliers regarding our procurement activities, and approximately 150 major suppliers participate in the briefing. In addition to explaining specific procurement initiatives, we share examples of improvements that suppliers have made, and honor outstanding suppliers. We also provide feedback on CSR evaluations, and hold lectures by external lecturers to raise awareness of ESG issues.

• Strengthening policy-based action and partner relationships

We are strengthening policy-based actions and our partner relationships to promote a common understanding of priority issues with key suppliers, align the directions of activities, and promote major reforms and improvements.

• Promotion of Business Continuity Planning

In 2021, events related to procurement risks that could not have been anticipated in the past occurred frequently, including not only natural disasters and industrial fires, but also a global shortage of semiconductors and raw materials, as well as an imbalance between supply and demand due to the spread of an infectious disease and a rapid recovery in demand.

We have long worked with our suppliers to establish an initial response communication system for use in the event of natural disasters, and to conduct associated drills. In September 2021, we held the Supply Chain Resilience Promotion Conference online, with the participation of approximately 160 suppliers, the aim of addressing a wide range of procurement risks. In order to strengthen the supply chain, it is necessary to expand the circle of encouragement from our suppliers to their suppliers, in addition to our own efforts with respect to our suppliers. At the conference, we explained our activities to strengthen business continuity planning (BCP), and shared specific examples of our suppliers to raise awareness. We aim to build a more robust supply chain, including secondary and subsequent suppliers, based on the three pillars of delivery, specifications, and information.

Process improvement through supplier assessments

To ensure fair and impartial transactions, we conduct supplier assessments for our suppliers in order to evaluate factors such as quality, delivery and price. We disclose the assessment results to the concerned suppliers, so that they can use them to improve and strengthen their structure. The primary objective is to have the assessments lead to concrete improvements, which is why the process does not stop with an assessment but extends to pragmatic suggestions for the supplier's PDCA cycle.

For the FY2021 supplier assessments, 109 companies were major suppliers, comprising 74.3% of the total amount of procurement. In addition, we also conduct a CSR evaluation at the same time as the supplier assessment.

In carrying out these assessments, the focus is on process management to encourage reforms, rather than uniform evaluations of assessment results. Going forward, we plan to implement supplier assessments with high transparency and continue to support the strengthening of suppliers, in addition to maintaining fair and impartial transactions.

4 Indicators and Targets

Please see Section 7 for details.
Coexisting with Local Communities

1 Governance

The Sekisui House Group has positioned coexisting with local communities as one of the key issues in the ESG management, from the perspective of wishing for the happiness of local communities, and is working from two directions: social contributions through our business, and social contribution activities in aspects that cannot be covered by business. In terms of activities that cannot be covered by our business, we focus on children and the environment as local issues. The ESG Promotion Committee under the Board of Directors (including two external experts) has been working to improve the social aspects of our ESG management, by defining initiatives based on exchanges of opinions with external experts.

2 Strategy

In addition to the accelerated aging of society and a declining birthrate, disaster prevention and mitigation measures, and carbon neutrality, particularly after the COVID-19 pandemic, local issues and the needs of residents and businesses have changed. In addition, community development for sustainable lifestyles that are tailored to individual cultural climates is needed. Against this backdrop, we are working to further the evolution of town development that solves social issues, while developing existing infrastructure services such as medical care, nursing care, and welfare, as well as the use of real estate. Sekisui House has comprehensive proposal strengths that integrate ESG, tangibles, intangibles and services in collaboration with homeowners and organizations ranging from NPOs and NGOs to governments and public welfare organizations. These proposal strengths will create and maintain strong relationships between residents and community hub operators to bring about a society where people can be happy in their community throughout their lives. In addition, for nonbusiness factors, we support local NPOs that are working on issues surrounding children and the environment through our own unique programs, such as the Sekisui House Matching Program, a joint donation system between employees and the Company. In addition, we encourage employees to contribute to society through volunteering. Employees use their own expertise—as part of a system that we set up to enable them to feel satisfaction, pride, and happiness—by participating in activities that spread happiness in the community.

Making Communities Happy through Business and Social Contribution Activities

Realization of a sustainable society
—Contributing to the creation of happiness in society—

3 Risk Management

A reliable network of experts

In order to promote a business that contributes to coexistence with the local community, it is important to understand local issues, have a relationship of trust with the business owner, and be compatible with the community hub operator. We implement projects that are meaningful to the community through collaboration with stakeholders. Sekisui House has comprehensive proposal strengths that integrate ESG, tangibles, intangibles and services in collaboration with homeowners and organizations ranging from NPOs and NGOs to governments and public welfare organizations. Through these collaborative efforts, we aim to create and maintain strong relationships between residents and community hub operators, bringing about a society where people can be happy in their community throughout their lives. In addition, for nonbusiness factors, we support local NPOs that are working on issues surrounding children and the environment through our own unique programs, such as the Sekisui House Matching Program, a joint donation system between employees and the Company. In addition, we encourage employees to contribute to society through volunteering. Employees use their own expertise—as part of a system that we set up to enable them to feel satisfaction, pride, and happiness—by participating in activities that spread happiness in the community.

Volunteer Web

In our social contribution activities, we have established and operate a Volunteer Web, to enable our employees to engage in volunteer activities safely and appropriately. On this website, users are able to search for NPOs (non-profit organizations) and other organizations that are active in each region, as recommended organizations for Sekisui House Matching Program subsidies, and can also register to participate in volunteer activities, either as an employee or a business office. This system was introduced and began operating at the end of July 2021. Since the organizations that are searchable on this website have been included based on specific criteria established in advance, the system allows users to participate in activities that are both safe and appropriate.

Activities and Other Related Information

Social contribution activities through our business

- **Trip Base Michi-no-Eki Stations Project to promote regional revitalization**

  The Trip Base Michi-no-Eki Stations Project, a regional revitalization project that we are developing with Marriott International, proposes a style of travel that encourages the exploration of lesser-known destinations to discover their unique charms, through use of a system of roadside rest stations known as “Michi-no-Eki.” In the first stage of the project, 15 roadside hotels were opened in six prefectures as of March 2022, providing a total of 1,152 rooms. In the newly initiated second stage, facilities will be opened sequentially starting in May 2022, with plans to have 1,184 rooms in 14 locations in 8 prefectures by 2023. This project, which operates the Fairfield by Marriott roadside hotels specializing in overnight stays with the aim of promoting the use of local stores and other facilities, is also deepening its collaboration with local communities and alliance partners. To help solve local issues and revitalize local communities, the project has realized a series of initiatives such as the Yorimichi Map, which uses DX to provide travelers with information regarding a tour of the Udatsu Wall Historical District in Mino City, Gifu Prefecture, and cooperation with the KURADASHI Challenge, which aims to reduce food loss by supporting the harvesting of agricultural products in Kyotamba Town, Kyoto Prefecture. While aiming to expand the number of rooms to roughly 3,000 nationwide, we will continue to contribute to regional revitalization by promoting tourism to achieve SDG goal 17, “Partnerships for the Goals.”

- **Healthy urban development through cooperation and function**

  Open Village Nokishita was established as an initiative to create a place where people with no previous ties to the area could live with peace of mind (Project planning and facility operation by AINest Co., Ltd., a wholly owned subsidiary of Kokusai Kogyo Co., Ltd.). The planned site is a newly developed area where many of the victims of the Great East Japan Earthquake have relocated. Although disaster victims were able to secure housing through large-scale reconstruction public housing, they tended to stay at home because they had few acquaintances, and there were few places to casually visit, which became a new concern for the community. This project aimed to create a place where a diverse range of people could gather and interact in an open and comfortable manner, within walking distance for local residents, including disaster victims, and to create a community center where healthy and sustainable lifestyles could be achieved. The Company has provided comprehensive cooperation for this project, including architectural planning, design, construction, and operational business matching. The courtyard is surrounded by a group home and short-stay facility for people with disabilities, a support center, a collective space featuring a job assistance café and a gallery, and a nursery school, and tenants are managed by a social welfare corporation, an NPO, and a business company. Engawa, which is located in the center of the facility, is used for events for families receiving childcare support, and also as a space for cooking, handicrafts, gymnastics, music, study, and other activities. Resident staff are available for consultation on daily living in the area, and Engawa continues to provide activities that are closely connected to the community, on a daily basis.

- **Creating a center of interaction to pass on local resources to the future**

  The Dai-no-mori Project is a project to create a symbiotic community in which memories of daily life are inherited, together with a forested property and well that have been passed down from generation to generation, a zelkova tree that is now more than 300 years old and is a valuable local resource, and fruit-bearing trees. The project proposes the creation of a community hub that is open to the community, where a pottery workshop, a café, a gallery, a restaurant, and a group home for people with disabilities all coexist. Based on the lessons learned from the Great East Japan Earthquake, we felt that it was important to build face-to-face, multi-generational relationships. Accordingly, we interviewed 90-year-old residents about their childhood memories, exchanged opinions with residents in the neighborhood, and developed a plan to create a place with people who would encourage visitors to grow attached to, and become involved with the area. The storehouse gallery (construction: Moku-Kobo Zui) was built using an existing wooden warehouse, while the interior of the café and restaurant was created in an event-like manner, with the participation of the operators’ family members, local volunteers, and children, allowing them to experience working together to create. The project received high praise for the planning process, and for becoming a role model for children’s participation in community development, and was awarded the Kids Design Association President’s Award in FY2021. The project continues to grow day by day as a sustainable hub, while delighting the neighborhood residents with its park-like atmosphere.
Coexisting with Local Communities

Creating a shared house for the hearing impaired
Our Kyushu Sha Maison Branch supported the construction of Sign Language House Yui, the first shared house for the hearing impaired in Japan. Sign language is the primary means of communication for the deaf. In addition, sign language and Japanese are two different things, and some elderly deaf people have difficulty handling written Japanese. For this reason, there have been an increasing number of cases in which deaf persons who moved into nursing homes for the elderly with normal hearing were unable to communicate through sign language and became lonely, spending the last years of their lives in suffering. To address this situation, the Nagasaki Prefectural Association of the Deaf established a study group, and while conducting various surveys and gathering information, the group participated in the welfare office tour of the Kyushu Sha Maison Branch. The association then collaborated with medical and long-term care managers at the head office to create a place for communal living while conversing in sign language, including administrative surveys, identifying suitable tracts of land, and financing. Sign Language House Yui was completed in March 2022.

EGOTANOMORI Project
In cooperation with EGOTANOMORI Park, the EGOTANOMORI Project (Nakano-ku, Tokyo) is intended to create harmony with the rich natural environment. This project is a multi-generational exchange and circulation-oriented community development, with rental housing and for-sale housing for families with children, assisted rental housing for the elderly, private nursing homes with nursing care, rental housing for students, and rental housing for nurses, along with convenient facilities such as restaurants and convenience stores, and child-rearing support facilities such as a kids’ room, a nursery school, and an after-school center. This area is adjacent to the Tokyo General Hospital, which is equipped with systems for contributing to regional medical care.

Above all, the project focuses on enriching the lives of households raising children and creating communities between the residents and with the local community. Living-In-Lab has been established as a base for such activities, and is operated by the Living-In-Lab Council established by the Company. The second floor, which includes a supervised kids’ room, picture book library, soundproof studio, and multi-purpose room, serves as a living room for the entire city block, and as a place for multi-generational interaction centered on children, while also serving as a community living room that can be used by residents of the surrounding community.

In addition, to strengthen their disaster prevention functions, a total of 915 households have been equipped with Ene-Farm household fuel cells for condomium use. These cells enable continuous power generation even during power outages. In addition, solar power generation and EV car sharing have been introduced to provide multiple sources of power, thereby reducing CO₂ emissions and enhancing disaster preparedness.

Miramachi, a large-scale development complex
Miramachi is a 27-hectare former factory site in Toyohashi City, Aichi Prefecture. This complex was developed with the aim of solving local issues and realizing a compact city. The concept was formulated based on the four values of community contribution, environmental awareness, sustainable growth, and disaster resilience, and materialized through proposals and coordination with the relevant government agencies, and explanations and dialogue with the local residents. The complex was finally realized through the joint development activities of the Sanki and local residents. The complex is divided into three areas: the northern area, which is used for residential purposes; the southern area, which includes a management association and the Sanki House Group; and the central area, which includes a community center and childcare facilities. The complex was completed in 2015.

In addition, child-rearing support facilities have been helpful in connecting people with each other. Residents in Miramachi and the surrounding community are connected through their children, and many people use the facilities every day. The majority of Miramachi residents are of the child-rearing generation, and the children’s neighborhood association holds radio exercises and Halloween events in the self-managed park. We will continue to carry out urban development that provides value and a bright, active future for children.
Coexisting with Local Communities

Working with local communities

• Sekisui House Matching Program
In FY2006, we began the Sekisui House Matching Program, through which the Company matches employee donations to NPOs and other organizations engaged in addressing social issues. About 7,800 employees participate in this program, which has so far donated over ¥500 million to 496 organizations. In August 2021, in order to achieve our global vision to make home the happiest place in the world, we reformed the system to contribute to the happiness of the community by solving social issues related not only to our homes, but also to children and the community environment, and furthermore to contribute to regional revitalization. To this end, we are promoting measures from the three perspectives of communication, connectedness and participation.

Application
Screening and grants

Grant recipient organizations: Volunteer organizations, NPOs, educational institutions, and others

We decided to provide a total of ¥45.8 million in FY2022 in grants to 94 civic groups from among those recommended by employees nationwide, focusing on activities that lead to coordination with our employees, the spirit of collaboration, and the SDGs. We are supporting activities related to the development of the next generation and environmental considerations, and are working toward SDG goal 17, “Partnerships for the Goals.”

• Tsunagari Café
Regular online seminars entitled Tsunagari Café, which any Group employee can freely participate in, regardless of time, place or status, have been started to provide opportunities to get the information on the Sekisui House Matching Program. Every seminar features different guests from inside and outside the Company who present basic knowledge about NPOs, their involvement in issues ranging from children’s food allergies to the LGBTQ community, and the Group’s collaborative activities with NPOs. The seminars also include time for dialogue and discussions among the guests and attendees. The café is held for approximately 40 minutes in the afternoon. It has been held two days each month, two to three times a day, for a total of 23 times since its start in June 2021, with a cumulative total of approximately 1,000 participants.

Harmony with local communities through social contribution activities

• Collaborative initiatives with charitable groups
Every year, we hold presentation ceremonies to announce our partnerships with charitable groups of the Sekisui House Matching Program. Ceremonies are held at the Sekisui House office closest to where the group is active to introduce what the group does and promote awareness of those activities. The grant has also led to support for construction of a building to serve as a base for the organization’s activities, as well as the creation of a garden for the activity base by our employees. These cases of cooperation with our business have been expanding. We actively promote these collaborative initiatives, create plans that are mutually beneficial, and take action together in ways that benefit society and the local area, thereby promoting revitalization.

• Overseas initiatives
Since 2019, wholly owned U.S. subsidiary Woodside Homes has been contributing to the Dream Home Giveaway,1 a series of charity events held by St. Jude Children’s Research Hospital.2 After its initial participation in Las Vegas, the company added the Sacramento event in 2020, and continued participating in 2021. These events are held in roughly 40 cities across the United States. Woodside Homes covered nearly all of the construction and material costs associated with construction of the lottery homes in Las Vegas and Sacramento. By supporting the activities of St. Jude hospital, it is helping to improve pediatric medical services in the country.

1. A charity lottery in which a portion of solicited donations, in the form of houses and land, are awarded to the lottery winners.
2. Established in Memphis, Tennessee in 1962, this globally renowned pediatric treatment and research facility provides medical treatment to children and supports their families free of charge.
The Sekisui House Matching Program, in which coexistence with local communities also leads to the growth of Sekisui House

Employees are happy to see a positive change through involvement with the community

The Sekisui House Matching Program does not end with mere donations. Collaboration that transcends business operations has emerged, with employees of each branch offices sharing ideas with local communities and NPOs, and organizing events that help revitalize the community. We have held workshops for disaster preparedness at Common Stage Miramachi, a large-scale 404-lot development complex that utilizes a former factory site in Toyohashi City, Aichi Prefecture. These activities include a workshop with the NPO Kodomo Wakamono Matching to teach children how to make cardboard cots and partitions through learning while playing, and holding lectures with the NPO Japan Rescue Association and the participation of local residents on how to protect their pets, while interacting with therapy dogs.

Participation in these events has resulted in clear changes in our employees. They began to work with a lively expression on their faces, without being preoccupied merely with the results. Communication among employees also became more active, and they were often seen freely discussing both the good and the bad without hesitation, regardless of their positions.

Many employees have made comments such as, “I am now more aware of being a member of society,” and “I never thought I would feel so fulfilled by helping others.” For example, at the Nagano Branch, the participation rate in the Sekisui House Matching Program has increased from the low 20% range to 80% in roughly a year and a half, which was a good outcome.

The significance of the Sekisui House Matching Program is coexistence with the local community

It was initially thought that the Miramachi Project at the Toyohashi Branch might not be a viable business venture, primarily due to the fragile condition of the surrounding roads. However, we strongly believed that the Sekisui House Group’s strengths should be applied not only to the growth of the Company, but also to the local communities, and this is how the project was implemented. Some initiatives were not constrained by issues of profitability, such as building a facility free of charge where people can gather to raise their children, and providing a portion of the site to Toyohashi City. Thanks to such efforts, Sekisui House has come to be trusted by the local community as a leader in community development.

The purpose of the Sekisui House Matching Program is nothing less than to achieve coexistence with the local community. Through the program, employees come to realize that the Company needs to be loved by people in the local community, and will grow as human beings. Eventually, this will help Sekisui House to become a sought-after organization in society.

The new rule that all NPOs eligible for grants under this matching program must be nominated by employees themselves is a unique opportunity for each and every one of us to create a connection with the local community. Let us share our thoughts about how we can contribute to our respective communities.
Coexisting with Local Communities

- Supporting career education for elementary and junior high school students
  As part of our Kids-First efforts in which we provide educational support in collaboration with educational institutions, we utilize the model houses Sekisui House operates around the country to provide children with fun hands-on opportunities to learn about housing. We are now setting up a career education program for elementary and junior high school students that will encourage them to think about the meaning and purpose of working and will help them in choosing their path in life. This career education program brings students to Sekisui House workplaces to tour housing exhibits where they experience virtual reality spaces and see presentations by Sekisui House sales representatives and home designers on building homes. In FY2021, since off-campus learning was restricted at elementary and junior high schools due to COVID-19 pandemic, we also held online classes by connecting our facilities situated nationwide and other facilities, we accept visits from children from elementary schools around the country, and hold classes on housing, entitled “Everyone’s House! Houses of the Future!” These lessons, held at our centers and locations in other parts of Japan, teach elementary school children about housing. The children are given the chance to take ideas from what they learn to design and build their own house of the future using architectural simulation software on computers and other means. In the three years from 2019, about 550 students have participated.

- Supporting programming education
  In 2019, Sekisui House was the only company in the housing and construction industry to cooperate with “Programming Education Promotion Month in Future Studies,” an educational initiative that was conducted in collaboration with the Ministry of Education, Culture, Sports, Science and Technology, the Ministry of Internal Affairs and Communications, and the Ministry of Economy, Trade and Industry. The initiative is a precursor to programming education that became compulsory in elementary schools in FY2020.

  At our five Tomorrow’s Life Museum hands-on, experience-based housing facilities situated nationwide and other facilities, we accept visits from children from elementary schools around the country, and hold classes on housing, entitled “Everyone's House! Houses of the Future!” These lessons, held at our centers and locations in other parts of Japan, teach elementary school children about housing. The children are given the chance to take ideas from what they learn to design and build their own house of the future using architectural simulation software on computers and other means. In the three years from 2019, about 550 students have participated.

  We believe that cooperation with children’s programming education is a way for Sekisui House to contribute to society through education, and to inform the public on how we are working to create happy homes. In addition, this activity also contributes to our efforts to achieve SDG goal 4, “Quality Education.” We are proud to continue supporting programming education in elementary schools through our participation and cooperation with this initiative, incorporating the study of housing into education.

- Participation in the Minecraft Cup 2021 National Tournament
  As a gold partner of the Minecraft Cup 2021 National Tournament, a programming education initiative, we are helping to foster the development of programming thinking in children. Minecraft is an open-world game that was introduced to Japan in 2011 and is popular, especially among elementary school students. Minecraft: Education Edition is being used in educational settings around the world to develop programming thinking in children. The ability to freely place blocks, and enjoy building and other activities makes this game a perfect fit for collaboration with our business.

  For the 2021 National Tournament, we cooperated as a partner by soliciting entries of Minecraft works based on the theme of “everyone’s home and future town in the age of SDGs,” with the “SDGs of Sekisui House” as the core theme. In collaboration with our 142 model house sites nationwide, the tournament was enlivened by offering tours of real homes and SDG learning programs to entrants. Of a total of 484 entries, 20 advanced to the final judging, and an awards ceremony was held at Tomorrow’s Life Museum Kanto via webcast. In partnership with the Minecraft Cup, we will create opportunities for housing education for the next generation in the metaverse era by broadly communicating our SDGs and housing organization.
School visit classes at educational institutions
Our Kids-First initiatives are designed to provide educational support through collaboration with educational institutions. Efforts include workplace experiences for students at Sekisui House sites and staff visits to schools to give lessons.

Captain Earth “Ie-cology” Seminar
Mixing hands-on learning and game playing, this educational experience about living with global warming gives students a chance to learn about and have fun with eco-friendly ways of living through the topic of housing.

“A Letter from Dr. Forest” Program
Dr. Forest (a Sekisui House employee) is a specialist in greenery who uses natural examples of nature—in a schoolground for example—to get children to think about ecosystems and the issue of native vs. non-native species of plants.

Support for children’s cafeterias, in collaboration with KURADASHI
Sekisui House participated in a demonstration experiment that was jointly implemented by KURADASHI Co., Ltd., which operates the social contribution shopping site KURADASHI, and the Keio Research Institute at SFC. The purpose of the experiment was to match data on disaster-prevention stocked food held by companies with children’s cafeterias in Osaka Prefecture. Sekisui House cooperates in the effective use of disaster prevention stockpiles that are nearing the point of replacement, as a supply of food for children’s cafeterias. Together, we are supporting children’s cafeterias, which are operated partly for community revitalization and food education.

Shin-Satoyama
In 2006, on the north side of Shin Umeda City in Osaka outside the Umeda Sky Building in which the head office of Sekisui House is located we built a landscaped area known as Shin-Satoyama. The area is about 8,000 m² in size and is modeled on a traditional Japanese Satoyama—a biotope consisting of a wooded area, bamboo forest, rice terrace, and vegetable farm in one compact area. The design is based on our Gohan no Ki Project that focuses on planting trees native to the area. In the 15 years of its existence, the landscape has become a flourishing ecosystem at which much wildlife can be seen including parent and duckling spottbill ducks, the threatened Eurasian sparrowhawk and Japanese night heron, and many other wild birds, insects, frogs, and lizards. Since 2007, the year after the landscape was created, we have used the area to support the education of children from the neighboring district. We give elementary school children the chance to experience different aspects of growing rice using traditional farm tools, from planting rice in a wet paddy to weeding to harvesting and threshing the rice. We give nursery school children the chance to plant sweet potatoes and to dig them up when they are grown. By coming into physical contact with a diversity of flora and fauna, the children learn the importance of food and deepen their understanding of an ecosystem. The scenery of Shin-Satoyama with the sound of the many birds that it attracts, provides a restful, healing atmosphere for office workers, local residents, and visitors alike. We plan to apply the knowledge gained from Shin-Satoyama to future environmental activities.

Sekisui House Eco First Park
In 1999, Sekisui House became the first company in the housing industry to introduce an Environmental Future Plan. Since that time, we have been promoting the creation of residential environments that are friendly to people and the earth, and that can be lived in for a long time, through our core business of homebuilding. These efforts were recognized by the Ministry of the Environment, which in 2008 certified Sekisui House as the industry’s first Eco-First Company. In the same year, Sekisui House opened the Zero Emission Center in conjunction with the Kanto Recycling Center. To symbolize the environmental efforts we have made over the years as a company, in May 2015 we reopened the Sekisui House Eco First Park. The park is a place where visitors can learn about our environmental activities in the areas of preventing global warming, conserving ecosystems, resource recycling, and environmental education, based on our Eco-First Promise. Through our efforts in this park, we are building a resource recycling system in line with the plan for establishing a recycling-oriented society, which was formulated based on the Basic Act on Establishing a Sound Material-Cycle Society. Furthermore, we have begun to study new methods for resource recycling, with a view toward responding to the circular economy demanded by the international community, and to incorporate these methods in specific initiatives.

Full-scale pre-engineered housing exhibited at the opening commemorative exhibition of the Nakanoshima Museum of Art, Osaka
Sekisui House is exhibiting full-scale pre-engineered housing (a lightweight steel-framed house) from the 1970s at the opening commemorative exhibition, “Our City—Portrait of Osaka” (April 9–October 2, 2022) at the Nakanoshima Museum of Art, Osaka, which opened on February 2, 2022. The opening commemorative exhibition, “Our City—Portrait of Osaka,” consists of Part 1 (Signposts to the city—Meiji, Taisho, and prewar Showa: April 9–July 3, 2022) and Part 2 (Resonance with ‘celebration’—The postwar Showa Period, Heisei Period, and Reiwa Period: August 6–October 2, 2022). Our exhibit is included in Part 2. This commemorative exhibition is to be held based on the theme of Osaka, and tracing the era from the Meiji period to the present, it conveys the vibrancy of Osaka through paintings, photographs, posters, and other works, as well as exhibits related to industrial design, such as home appliances and pre-engineered housing. In this exhibition, living spaces of the time will be reproduced by displaying the framing system that forms the base of today’s Sekisui House, the development of plans based on nLDK, as well as interiors built using interior materials then called “new construction materials,” in cooperation with housing building material and equipment manufacturers.

Developing Human Resources

1 Governance

Personnel system and human resource management structure

Based on our global vision to make home the happiest place in the world, Sekisui House has created a vision for the future of maximizing the happiness of our customers, employees and communities as our ideal vision for 2050. To make Sekisui House the happiest company in the world, in addition to the diversity and inclusion and workstyle reforms that we have been working on, in 2021 we launched a new personnel system reform, and in February 2021 we revised our grading system in advance.

The main purpose of the system reform is to support self-directed career development. We have established two types of career courses for managers: managerial positions that contribute to the organization through management, and specialist positions that contribute to the organization through high-level expertise. We support personnel in these positions, so that they can consider their own strengths and personality, select their future career course for themselves, and grow in their chosen direction.

Since one of the important elements for supporting that goal is full communication between supervisors and members, we have newly established career interviews, in which supervisors and members discuss careers on a regular basis. These interviews will be held to share employees’ values and ideas about their careers, as well as to support their growth by providing appropriate feedback on their individual strengths and development points.

In February 2022, we reorganized the Personnel Department to establish the Human Resources Development Department, and are working to bring personnel system reform to the entire Group, and to strengthen our talent management system. Specifically, we are improving the quality of our recruiting methods and standards, implementing succession plans, and promoting the self-directed career development of the employees who support these efforts, thereby developing human resources who are capable of willingly creating value for society and our stakeholders.

In April 2022, we revised our class and compensation systems.

Outline of Personnel System Reform

Key points of personnel system reform

Self-directed career development

- Career course selection
- Early creation of management opportunities
- Fair and transparent appraisal
- Career interviews with supervisors

Diversity and Inclusion

Self-directed career development support

Workstyle reforms

Employee happiness

Personnel system reform

Purpose of Personnel System Reform

Personnel system reform that supports autonomous career development

Main features of the new system

| Course and grade | 
| --- | --- |
| Double track course (Managers) | 
| Managerial (M) position that contributes to the organization through management |
| Specialist (SP) position that contributes to the organization through high-level expertise |
| Introduction of role classes for managerial positions |
| Promotion according to merit (regular employees) | 
| Promotion decisions based on merit, not on age or years of employment |
| Early promotion of highly evaluated employees (promotion to manager possible in as early as eight years) |
| Fundamental revision of personnel evaluations and enhancement of job interviews | 
| Ability/behavior review and performance review are separated |
| Ability/behavior review is reflected in class changes and salary changes, while performance review is reflected in performance bonuses |
| Revitalization of communication between supervisors and members |
| Career emphasis and talent management | 
| Self-assessment of career plan and self-emphasis of one’s ability/knowledge/experience |
| Periodical career interviews five times a year |
| Rotation and human resource matching using Talent Palette |

Employee ability development program

To make home the happiest place in the world, we have programs for each job type to help our employees increase their expertise and meet the diverse requirements of our customers. Long-term skills development programs are also available, and we launched a three-year training program for detached home sales in FY2018. This program enables customers to be happier by using a customer-centric approach and a broad range of specialized knowledge and skills for housing sales. In FY2021, 415 people participated in this program. We also have a program for technical positions that instills shared specialized knowledge required after two years with Sekisui House, and 273 people participated in this program in FY2021. Other programs enhance specialization in all of our businesses from year three on.

Developing Human Resources

Evaluation of individual performance

In February 2021, we introduced a new grading system in which evaluations are made from two perspectives: an ability/behavior review and a performance review. In the ability/behavior review, we evaluate ability/knowledge/skill, motivation/attitude, and the resulting concrete behaviors. In the performance review, we evaluate the process used to achieve final results using management by objectives, as well as the resulting performance. We use the evaluation results to reflect the ability/behavior review in promotions, pay raises, and retirement allowances, and to reflect the performance review in performance bonuses. In addition to the above matters, the sales divisions provide monthly performance allowances based on individual performance.

The multifaceted observations that have been conducted for some managers since FY2019 will be expanded to all employees who enter managerial positions in the new personnel system from FY2022 onwards. Multifaceted observations are implemented to collect the opinions of subordinates and colleagues regarding employees in managerial positions, and to provide them with feedback, so that they can objectively reflect on their behavior, which leads to growth and improvement. In addition, we support this process by combining it with external coaching.

Overview of Our Grading System

We conduct two types of personnel reviews: an ability/behavior review and a performance review.

2 Strategy

Securing, training, and managing human resources according to business strategies

Based on the outlook for future business, we make and execute strategic recruitment plans while taking into account data such as turnover rates.

With regard to the human resources required for future business promotion (e.g., DX human resources), we are aiming to create a system that allows us to compile pipeline information inside and outside the Company, and make proposals to the business side. As for transfers and training, we have built a dashboard in the personnel system that allows organization leaders to check the status of their organizations at a glance, and established a data environment that is useful for decision-making, such as transfers and educational planning.

In FY2021, we introduced a talent management system that is common to our Group companies, and are now able to centrally manage the personnel information of 28,362 people throughout the Group. In order to realize the maximum results of the Group through this system, we plan to maximize the transfer of human resources (human resource investment in growing businesses) as well as the performance of human resources throughout the Group.

Managerial promotion system based on the new personnel system

As part of the revision of our personnel system in April 2022, we have established a system that allows talented employees to be promoted to manager early on.

Specifically, we have reduced the number of grade levels from the previous nine levels to just five levels, and have put a system in place that allows employees to be promoted to manager in a minimum of eight years after joining the Company. Previously, a minimum of 16 years was required to be promoted to manager.

In the new system, we have developed a system for individuals to be promoted to manager based on their ability and behavior, regardless of their age or history in the Company.

Use of people analytics

With the introduction of our talent management system, we have established a system that allows the centralized management of information (such as multifaceted observations, personnel evaluations, career ambitions, and results of external assessments) that was previously managed using multiple systems and print media. We also use this system in succession plans and human resources meetings for the appointment of officers and managers, and have created an environment in which upper and middle management can make decisions based on data.

When recruiting new graduates, we analyze and extract the human resource requirements for outstanding employees, and hire human resources who meet those requirements, which helps us to secure excellent human resources with great potential. In selective training after employees join the Company, we use various types of human resource data, including aptitude tests, to select employees.

3 Risk Management

Risk management regarding human resources

- Risk management regarding engagement

We conduct an annual survey on governance awareness to determine the Group’s current situation regarding our corporate philosophy, vision and strategy, employee autonomy, workplace culture, and compliance. Based on the survey results, we encourage department heads to identify and resolve issues in their department, and to reflect organization-wide issues in Company policies and training programs. Key initiatives in FY2021:

1. Sekisui House clarified the development path for human resources and individual employee growth by clarifying the skills and behavioral standards for each level and reflecting these items in effectiveness and behavioral assessments.

2. We also clarified the relationship between individual and organizational goals, while encouraging individuals and the organization to deliver
Developing Human Resources

results by introducing MBO methodologies and a performance-based evaluation system.

(3) We introduced career interviews (five per year) to support employees’ autonomous career development and implemented training for the managers conducting interviews to enhance interview quality.

- Ascertaining and responding to risks in education and dissemination

The following PDCA cycle for training programs helps us transfer lessons learned in training to the workplace.

(1) Overall: Clarify the purpose of the training, determine the quality and retention levels from the participant report, use that as reference for future training, and continually improve the quality of programs, textbooks, and instructors, while imparting external knowledge.

(2) Selection and other forms of training: We help students acquire knowledge and change their behaviors with issue-driven preparation and follow-up training as well as coaching by outside instructors.

5 Activities and Other Related Information

Fostering the next generation of business leaders

We have held the Keiei-juku management training program since 2018 with the objective of training and selecting future leaders in each organization (for the positions of branch manager, head office senior manager, factory manager, etc.). A total of 42 employees participated in its third session which started in June 2021.

The SHINE! Challenge Program (acronym for Sekisui House Innovators and Entrepreneurs Challenge Program) entered its third term in FY2021 with 15 participants. Launched in October 2019, this program trains young leader candidates (aged 30-35 years).

The program is designed to discover, train and foster talented young individuals early on to systematically produce strong candidates for leading the business into the future.
Developing Human Resources

Initiatives to strengthen management capabilities
In addition to inculcating an open, positive corporate culture, Sekisui House has been enhancing the ability of branches and teams to manage, develop people and invigorate their organization with an array of training courses for risk management, new branch managers and new leaders. A total of 531 managers have participated in these courses.

In addition, we supported the introduction of a new personnel system in FY2021 by providing evaluator training for 2,715 people involved in personnel evaluation.

Support for employee’s self-directed career development
We provide training that allows each and every employee to formulate their own career vision, and to take concrete actions in order to realize that vision. We have also developed training for young employees and mid-level employees, including the autonomous career development course, a career training program for mid-career employees. A total of 15,436 employees have completed these training courses. We continuously support our employees in their self-directed career development while iterating improvements to the training content through questionnaires and follow-up surveys.

From FY2022, along with the transition to a new personnel system aimed at strengthening our human resources, who continue to evolve in response to a changing environment, we will also update our career education system with more enriched content.

In-house certification programs
Note: People certified in FY2021 (as of April 2021)

• On-site supervisor: Chief Constructor
This program assigns the role and qualifications of Chief Constructor to outstanding on-site supervisors, thereby encouraging them to pursue even higher goals. We have trained a lot of excellent on-site supervisors who engaged in routine work aiming to acquire this certification, and this has improved our brand power and productivity. In FY2021, a total of 153 supervisors were certified as Chief Constructors.

• Design: Chief Architect
The Chief Architect program was established for developing designers who support the creation of quality houses. By granting the role and qualifications of Chief Architect, the program aims to further improve skills of designers. The certification period is two years, and in FY2021, a total of 282 Chief Architects are carrying out their vital role across the country.

• Structural planning: Structural Planning Specialist
This is a certification program established to foster designers who play a leading role in structural planning at offices. The purpose of the program is to improve the safety and rationality of structural planning by granting the designer the role and qualifications of a certified Structural Planning Specialist. The certification period is three years, and the total number of certified specialists in FY2021 was 173.

• Design (Platinum business): Platinum Specialist
To promote what we call our platinum business (housing for senior citizens, welfare buildings in general for children, people with disabilities and others, medical facilities, etc.), the role and qualifications of the Platinum Specialist are granted to employees engaged in design who have an excellent track record in design, combined with advanced expertise and the skills necessary for designing platinum properties. In FY2021, the certified specialists was 42.

• After-sales service: Customer Support Meister (CS Meister)
To increase the number of customers who support the Company, the certification recognizes the employees who excel in customer support and take the initiative in carrying out their duties with a high level of skill and abundant knowledge. In FY2021, 83 certified “CS Meisters” were active across Japan.

Career interviews
In FY2021, we started conducting career interviews in which supervisors and members converse on a regular basis, for the purpose of realizing self-directed career development by our employees. In preparation for these interviews, we trained approximately 2,500 interviewers, and have been establishing an environment that enables the effective implementation of interviews.

According to the results of questionnaires we conducted at the end of FY2021, we found that 75% of supervisors had answered that career interviews are useful for supporting self-directed career development. In the future, we aim to raise awareness regarding human resource development, and support self-directed career development based on full communication between supervisors and members.
### Succession plan

In 2021, we started succession plan meetings. Directors of the Board, employed executive officers and operating officers participate in this meeting to share information on their successors and discuss their training plans, for the purpose of enriching the pipeline for management candidates. By holding this meeting twice a year going forward, we will enrich the management candidate pipeline and realize the sustainable growth of the Group.

### Career Challenge System

As part of our efforts to promote the creation of systems that enable diverse human resources to play an active role, based on our basic personnel policy of “Human Resource Sustainability,” we introduced the “Career Challenge System” to provide opportunities for employees with a challenging spirit to make further progress.

Based on job type, job content, and (expected) duties to be assumed in the future, our employees are categorized into four groups: “Sales engineering job group (main career track),” “Production skills job group,” “General clerical job group,” and “Employees working in specified areas (regional employees).” Our personnel systems are operated according to the characteristics of each job group in terms of training and basic treatment. The program supports the conversion of employees in production and general clerical work as well as job group in terms of training and basic treatment. The program supports the development of human resources to play an active role, based on our basic personnel policy of “Human Resource Sustainability,” we introduced the “Career Challenge System” to provide opportunities for employees with a challenging spirit to make further progress.

### Training for employees on environmental initiatives

When introducing our eco-friendly homes to customers, it is important to provide an explanation based on sufficient knowledge. For this reason, we implement a wide range of education and training programs for our employees.

- **Green First Training**

Our Green First® eco-friendly homes constitute the backbone of our efforts to combat global warming and are placed at the core of our product strategy. Accordingly, it is essential to have a deep understanding of the societal background and national policies, as well as technical elements, contents of the system, and aspects that must be explained to customers, such as the economic benefits and details of public subsidy programs. For this reason, we have been conducting a group training program called the Green First Training.

Thirteen years have passed since the launch of Green First® homes, and our current content has evolved into ZEH for both detached houses and multi-unit housing complexes. Currently, the quality of our training has improved thanks to the introduction of tablet terminals and the development of online learning environments. Training is intended not only for sales and technical staff at new construction contractor offices, but also includes customer service employees involved in after-sales maintenance, as well as Sekisui House Remodeling employees in the remodeling division, and Sekisui House Real Estate employees who handle ZEH rental housing. As of FY2021, we have held training courses a total of 656 times, and a total of more than 35,400 employees have taken these courses. (Held 22 times, with more than 1,500 employees participating in FY2021)

- **Training of online programs**

In order to prevent the spread of COVID-19, we have developed an online program starting in FY2020. We have replaced group training with these online programs. As a result of reviewing and improving the programs to ensure that the effectiveness of career training and other programs, which are generally said to be less effective in an online format, the effectiveness of the programs was maintained and improved as participants became more self-reflective. By combining this with a video pre-study program and follow-ups for training transfer, we have built highly cost-effective human resource development methods that are not reliant on space or location.
Diversity and Inclusion

1. Governance

Announcement of “Human Resource Sustainability”

In 2006, the Group announced the commitment to Human Resource Sustainability. The three pillars of our diversity promotion policy are promoting the participation of women; utilizing diverse personnel; and promoting diverse workstyles, and we are working to create an environment and structure where both employees and the Company can achieve sustainable growth. In the same year, we established the Diversity Development Team, and started engaging in full-scale efforts. Later, this team was reorganized into the Diversity and Inclusion Promotion Office in February 2014, and again into the Diversity and Inclusion Promotion Department in April 2018. We are working to support the active participation of female employees as well as diversity in our human resources.

Results and promulgation of activities

In December 2017, we became the first company in the construction industry to receive the Minister of State for Special Missions Award (Gender Equality) of “Advanced Companies where Women Shine” from the Gender Equality Bureau of the Cabinet Office. This award was granted as recognition of our efforts in: enhancing women’s empowerment in the entire construction industry through human resource strategies to encourage female employees to pursue their careers and development and commercialization of temporary toilets for women at construction sites; promoting female employees to managerial/executive positions Group-wide; and implementing IT technology-based workstyle reforms to support work-life balance.

In October 2020, we were awarded the Grand Prix at the IKUMEN AWARD 2020 sponsored by the Ministry of Health, Labour and Welfare. Our efforts were highly evaluated for the male employee childcare leave program which the Group put into full-scale operation in September 2018. We will continue to share the learning and knowledge gained from the operation of this program with society at large, hoping to contribute to building momentum so that we can gain support in society for male employees taking childcare leave.

In March 2021, we were selected as a Nadeshiko Brand 2021 by the Ministry of Economy, Trade and Industry and the Tokyo Stock Exchange for the sixth time, making us the only company in the housing and construction industry to achieve this feat. In October 2020, we became a member of The Valuable 500, an international initiative promoting the active participation of people with disabilities.

The Valuable 500 is an activity that was launched at the World Economic Forum Annual Meeting (Davos) held in 2019, based on the idea that inclusive business creates inclusive societies. In this regard, 500 major companies around the world have joined in this activity, with the aim of initiating reforms by business leaders that enable persons with disabilities to demonstrate their potential value in business, society, and the economy. The Sekisui House Group, which aims to become a leading company in ESG management, has endorsed the objectives of The Valuable 500 and established the following commitments.

1. Customer happiness: Create homes and communities to provide lifelong housing.
2. Employee happiness: Provide opportunities and develop an environment for employees with diverse backgrounds to reach their full potential.

2. Strategy

Making diversity and inclusion a driver of growth

One of the important elements in promoting diversity is the concept of diversity and inclusion. In every organization or workplace, we must respect and recognize differences in age, gender, nationality, values, sexuality, disabilities and other characteristics. We aim to build a status and environment where goals and roles are made clear and information is shared, there is mutual respect and trust, employees proactively participate and contribute, and employees are used effectively as members of their organizations, thereby creating psychologically safe workplaces. We believe that this will lead to the creation of value through the strength of diversity. The Group has made diversity and inclusion a growth driver, and set the goal of becoming a leading company in ESG management.
Diversity and Inclusion

Action Plan for the Promotion of Active Participation by Women

In February 2021, we set new targets for the Sekisui House’s Action Plan for the Promotion of Active Participation by Women based on the Act on Promotion of Women’s Participation and Advancement in the Workplace. With two major targets of “More than 310 female managers” and “100% take-up rate for eligible male employee childcare leave” (both by FY2025 or by March 31, 2026 on a Group basis), we continue making efforts to achieve the targets.

However, in male-centric homogeneous organizations, there is a high risk that mistakes and accidents arising from a deterioration of communication. When it comes to diversification of workstyles, we must promote styles that are not tied to a single location, such as telework. Otherwise, we will be unable to satisfactorily support the diverse values and lifestyles of our employees, customers, and business, and it will become difficult to plan and implement BCP, including measures against large-scale disasters and infectious diseases. Furthermore, it will be difficult to promote a balance between work and childcare, elderly care, and treatment of injuries and illnesses, which will lead to decreased employee motivation and the loss of talented human resources.

1. Figures are for female employees, with male employee values set at 100. Scope of data collection: Full-time employees of all the following Sekisui House Group (on a consolidated basis: Sekisui House, Sekisui House Real Estate, Sekisui Grand Mast. Ltd., Sekisui House noie and Sekisui House Remodeling, as of the end of January 2022).

3 Risk Management

We aim to be an inclusive organization in which diverse employees play active roles in order to meet the diverse needs of our customers. However, in male-centric homogeneous organizations, there is a high risk that values, policies, strategies, and other aspects, especially in terms of management, will become biased, and it is expected to be difficult to respond to intensifying market competition and the globalization of business. If we do not foster a corporate culture of mutual recognition and respect for diverse ideas, values, policies, strategies, and other aspects, especially in terms of management, we will become biased, and it is expected to be difficult to respond to intensifying market competition and the globalization of business.

When it comes to diversification of workstyles, we must promote styles that are not tied to a single location, such as telework. Otherwise, we will be unable to satisfactorily support the diverse values and lifestyles of our employees, customers, and business, and it will become difficult to plan and implement BCP, including measures against large-scale disasters and infectious diseases. Furthermore, it will be difficult to promote a balance between work and childcare, elderly care, and treatment of injuries and illnesses, which will lead to decreased employee motivation and the loss of talented human resources.

4 Activities and Other Related Information

Implementation of training for female managerial candidates and creation of role models

As part of its aim to appoint more than 310 female managers by FY2025 (March 31, 2026), the Sekisui House Group provides training for female manager candidates and creates role models for career development according to job types. Sekisui House Women’s College is held annually to train management candidates. Twenty women are selected from the Sekisui House Group nationwide as promising management candidates. Our focus here is building a pipeline for the proper appointment of talented female employees to managerial positions, by systematically and effectively developing suitable candidates using a two-year curriculum.

Promoting participation by women in sales positions

Since 2005, we are actively hiring female sales representatives to provide customers with detailed proposals from a female perspective. As of the end of January 2022, 397 female sales representatives (non-consolidated basis) are working in various parts of Japan.

In the housing industry, due to the specific characteristics of its business structure, there have been only a small number of women in both sales and technical positions, but we have faced this issue head-on and have been focusing on the development and
retention of female sales representatives. In addition to providing opportunities to build networks across office boundaries, the Diversity and Inclusion Promotion Department holds study sessions and interviews with young employees to resolve their concerns and problems.

Expanding the advancement of women in remodeling sales

Sekisui House Remodeling, which is in charge of genuine remodeling of homes built by our Company, actively recruits women with families and experience in childcare as “remodeling advisors” (sales representatives). In the remodeling business, where we often have meetings with female owners, female sales representatives who can provide a sense of security are easy to fit in and are active throughout the country. With the option of a four- or five-day workweek and the use of childcare leave and shorter working hours, many of our female employees are able to balance work and family life. As a result of these measures, women are making steady progress, and Sekisui House Remodeling has two female executives, 600 female sales representatives (59.5% of remodeling sales representatives), one female office sales lead and 94 female area sales leads (as of January 31, 2022).

Promoting the participation of women in technical positions

Women are also active as specialists who are certified for the first time only with excellent qualities, achievements, and reliability. These employees include Chief Architects with advanced design skills, Platinum Specialists with highly specialized design skills for elderly housing and welfare facilities, and Structural Planning Specialists with advanced skills in architectural structural design. In addition, as of the end of December 2021, there are 25 female executive officers, 290 female technical managers, 670 female specialists, and 108 female managers in each area in order to promote them to the position of assistant managers.

Under the promotion of on-site supervisors, Sekisui House has been recruiting women with families and those preparing for family life. The aim is to provide a sense of security are easy to fit in and are active throughout the country. With the option of a four- or five-day workweek and the use of childcare leave and shorter working hours, many of our female employees are able to balance work and family life. As a result of these measures, women are making steady progress, and Sekisui House Remodeling has two female executives, 600 female sales representatives (59.5% of remodeling sales representatives), one female office sales lead and 94 female area sales leads (as of January 31, 2022).

Human resource development of top runners

Sekisui House has been recruiting female technical staff since before the Equal Employment Opportunity Law came into effect. Currently, we have an increasing number of female managers including architect leads and operations leads. Furthermore, we have established a development plan for young employees in each area in order to promote them to the position of assistant manager, and we are working to expand the pool of candidates for operational management positions. We are also working to appoint role models for future career plans.

Expansion of job scope (design, on-site supervision, cost estimation/management, etc.)

Under the Female On-site Supervision Support Program, we are operating a system to foster female on-site supervisors through cooperation between nationwide sales administration headquarters and the head office by holding training and study sessions, introducing tools and lightweight construction helmets for women, and improving the working environment. As part of this effort, we continue to hold the Company-wide Women’s On-Site Supervisor Meeting. Even during the COVID-19 pandemic, we held online meetings, which provided an opportunity for women to share their goals and concerns with each other while learning important communication skills that are required for on-site supervisors.

Under the program, the Kanagawa Sales Administration Headquarters has created a three-year roadmap for the systematic promotion of female on-site supervisors and the creation of a nationwide network by expanding the successful model of building horizontal ties through the assignment of one female on-site supervisor to every branch nationwide. In addition, we are improving the work environment and providing new services and value for our customers through new perspectives gained from the ideas of female on-site supervisors in planning temporary work sites and holding opinion exchange meetings.
Support of employees attempting to balance work and family life

As the percentage of new graduate female employees in technical positions has raised to 40%, there is an increasing number of employees who are playing active roles at work while engaging in childcare or nursing care. Since 2012, our Company has been holding Study and Exchange Meetings for Female Technical Personnel across the country with the aim of enabling female technical staff to play an active role in the Company over the long term. We share familiar role models and work to expand our network to help build career visions and increase motivation.

Prompting all eligible male employees to take childcare leave

In September 2018, the Group launched a male employee childcare leave program to encourage male employees with a child or children under the age of three to take at least one month off work to focus on childcare. The leave is paid for the first month, which can be divided into as many as four stretches of time to adapt as needed to one’s individual circumstances. We have created our own “Family Meeting Sheet” that facilitates communication on such issues as determining when to take the leave and for what purpose, as well as how to share childcare and housework during the period of leave. The sheet is available on our website so anyone can use it.

Since February 2019, when full-scale operation was implemented, all 1,239 male employees whose children reached their third birthday (the deadline for taking childcare leave) by the end of February 2022 have taken at least one month of childcare leave, maintaining a 100% take-up rate. Since April 2021, the system has been enhanced, permitting male employees to take eight weeks off after the birth of their child. We are promoting awareness of the importance of husbands staying close to their wives during the eight weeks after childbirth, which is a period of great physical and mental strain for mothers and a time when the risk of developing postpartum depression is high. We believe that men's participation in childcare and housework will contribute to the achievement of the SDGs, including women's participation in society, and provide individual support from pregnancy to the child's birthday, place of residence, etc.}

Expanding our support system for balancing work and life

We are expanding various systems to support our employees, so that they can balance work with childcare, elderly care, and medical treatment.

• Shortening and changing working hours for childcare

Employees who care for children up to the third grade of elementary school can apply for a reduction in their prescribed working hours. (This can be set for each day of the week, up to two hours per day, in 15-minute increments.) In addition, while these employees were already allowed to adopt a sliding work schedule, in which it is possible to start or end their work day earlier or later provided they work the prescribed number of hours.

• Nursery School Hunting Concierge

For employees who are planning to enter their child into a childcare facility within one year after birth, we provide individual support from pregnancy to the decision on a facility by providing information on activities, expertise, and childcare-related information according to the individual’s circumstances (child's birthday, place of residence, etc.).

• Financial Aid for Childcare

Under this system, the Company pays a portion of the facility usage fees for temporary childcare so that employees who are raising children can work with peace of mind, as well as supporting the use of Sunday childcare and full-time work. If the prescribed conditions are met, the Company subsidy will be added to the facility usage fee (up to 70%).
Diversity and Inclusion

• Nursing care support program
Employees can take paid leave for five days a year (10 days for two or more care recipients) on an hourly basis (legally, in half-day increments) to care for their children when they are sick or to provide nursing care for other family members. In anticipation of a rise in the number of caregiving employees with the aging of the baby boomer generation, our Caregiver Leave Regulations have been revised and applied since 2014, from the perspective of supporting the balance between work and caregiving.

Promoting smart work
The Group aims to realize smart work, and will revitalize communication by reforming our work environment, developing the ICT environment, and optimizing our systems and rules. In addition, we will also promote workstyles that are not reliant on location, such as working from home, with the aim of improving productivity and creating new ideas, thereby realizing diverse workstyles.

COVID-19 has brought on changes in workstyles and lifestyles that in turn have made flexible working commonplace, ranging from remote work to flex systems that allows individuals to build their schedule in 15-minute intervals forward or backward between 7:00 am and 11:00 am. We will maintain and deepen the new workstyles that we have developed using our accumulated wisdom and ingenuity to become the happiest company in the world with employees who feel deep satisfaction and happiness in their work.

Creating an LGBTQ-friendly corporate culture
Sekisui House Group strives to create a corporate culture that encourages all employees to accept one another no matter their orientation so that everyone can feel secure and free to work in their own fashion. In November 2019, a new system was established for registering one’s partner in a common law or same-sex marriage under Company rules as part of our employee welfare system, along with a consultation desk exclusively for LGBTQ-related matters.

In recognition of these efforts, we became the first major housing manufacturer to receive the Gold certification in the PRIDE Index for four consecutive years. The PRIDE Index is Japan’s first index for evaluating corporate efforts concerning LGBTQ. It was formulated in 2016 by work with Pride, a private organization, with the objective to create a workplace where sexual minorities such as LGBTQ can work with pride. We were certified as Silver in 2016 and 2017, and Gold from 2018 through 2021.

Promoting the employment of persons with disabilities
As of January 31, 2022, the employment rate of persons with disabilities at Sekisui House, Ltd. was 2.9%,* exceeding the legally mandated 2.3%, which was raised in March 2021. We will continue to actively promote the employment of persons with disabilities, as we aim to employ and retain at least one or two at every worksite. Since 2015, we have held diversity meet-and-greet events participated in by employees with disabilities and their supervisors, for the purpose of establishing a network that transcends their respective departments, as well as building relationships that allow mutual communication and consultation, and improving their respective work environments.

In the COVID-19 pandemic forced us to hold these meetings in an on-demand video format; however, many employees with and without disabilities from all across Japan participated by viewing the videos. At the end of 2021, we held a web-based meet-and-greet event with visually impaired employees and their supervisors.

Encouraging the employment of senior citizens and promoting their advancement
Sekisui House used to have an age 60 mandatory retirement rule and a system for re-employing retired workers up to the age of 65. In April 2015, the retirement age was raised to 65 so all individual employees of the Group can work more enthusiastically, capably and energetically for a longer period. In addition, in April 2020 we introduced a post-retirement re-employment system for employees aged 65 through 70 to support their active participation.
policies, plan specific measures, and disseminate and promote these measures among all employees. The subcommittee then evaluates and improves each measure based on the indicators it has set, and works strategically to maintain and improve the health of employees.

As a result of our efforts to achieve happiness health management based on the aforementioned policy, we were selected to the Health and Productivity Management Outstanding Organization (White 500) by METI for the third consecutive year as a corporation that makes strategic efforts to consider the health of its employees and others from a management perspective.

1 Governance

An organizational structure to promote “happiness health management”

With employee health enhancement positioned as one of the important issues for promoting ESG management, the Sekisui House Group is rolling out strategic initiatives based on the annual goals and plans approved by the ESG Promotion Committee (including two outside experts) formed under the Board of Directors. We have positioned health enhancement as the source of employee happiness, and have accordingly named it “happiness health management.” Specifically, the Social Improvement Subcommittee’s “Happiness Health Project” (established in June 2021) has played a central role, and in cooperation with the health insurance union and external advisors, we are working to identify issues, formulate Company-wide

Health management promotion structure diagram

2 Strategy

Issues and policy for forming healthy and happy lifestyles

According to the medical checkup results of our male employees over 40, we found that obesity risk exceeds 50%, lipid risk is roughly 70%, and blood sugar risk is just less than 50%. These percentages are high compared to other companies in the health insurance union to which we belong, and we recognize that preventing lifestyle-related diseases (including metabolic syndrome) is an urgent health issue. To prevent lifestyle-related diseases, it is important that employees make lifestyle adjustments while in their 20s or 30s. Therefore, we are promoting initiatives that use indicators for exercise, diet, sleep and other factors to improve lifestyle habits.

Furthermore, in order to maintain mental health and improve happiness, we have established initiatives to improve mental health as an indicator, as well as measuring the level of happiness of employees and the organization, which will be used to promote happy lifestyles. By helping more employees to work energetically in their own ways, happy and healthy both mentally and physically, we promote the creation of innovation, which contributes to the health and happiness of our customers, communities and society, and leads to sustainable business growth.

Goals of happiness health management

We have set the following four goals and are working to achieve them by analyzing the results of medical checkups.

1. Reducing risk holders of lifestyle-related diseases (including metabolic syndrome and potential patients)
2. Boosting the happiness of employees and workplaces
3. Improving productivity (correcting presenteeism)
4. Preventing mental disorders (decreasing long-term absenteeism and leave taking)
3 Risk Management

We are promoting activities through a PDCA cycle based on a strategic map, in order to achieve the goals of happiness health management.

- Health measures
  - Use of Health Challenge
  - Use of the Sekisui House FIT App
  - Challenge 6 promotion events (E.g.) Walking Challenge*
  - Health Workshops, etc.
  - Measures to promote secondary medical checkup*
  - Mental health measures
  - Mental health measures
  - Workstyle reform measures

* Incorporated into the indicators of President’s Awards for workplaces

- Behavior and awareness change indicators
  - Improvement of health literacy
  - Improvement of health awareness (awareness changes)

- Challenge 6 initiatives (behavior changes)
  - (1) Exercise
  - (2) Diet
  - (3) Drinking
  - (4) Sleeping
  - (5) Smoking
  - (6) Mental health

- Reducing the number of workers suffering high stress and working long hours

- Happiness health management goals
  - Reducing the number of employees at risk of lifestyle-related diseases (including metabolic syndrome and potential patients)
  - Boosting the happiness of employees and workplaces
  - Improving productivity (reducing presenteeism)
  - Preventing mental disorders (decreasing long-term absenteeism and leave taking)

The Social Improvement Subcommittee verifies the effects of measures. We identify any issues, and use them to plan for the next fiscal year.

4 Indicators and Targets

Please see below for details regarding KPI performance, target values, etc. based on the strategy map.

5 Activities and Other Related Information

Happiness Health Challenge 6

The Group promotes activities related to health management in six fields, under the title “Happiness Health Challenge 6.” Employees first identify their own health issues, using an AI-based service to utilize medical checkup results and a Well-being Survey that enables them to visualize their happiness level and that of their organization. Employees can proactively engage in activities in the six fields by registering an original My Happiness Health Declaration based on the issues they have identified.

In June 2021, we launched the Happiness Health Project operated by employee representatives in order to promote Happiness Health Challenge 6. In addition to providing information and developing systems that contribute to the promotion of happiness and health, we hold seminars and promotional events regularly to help individuals achieve the challenges they have set.

Sekisui House’s Happiness Health Challenge 6

- Six challenges to promote physical and mental health

- Moderate exercise
- Balanced diet
- Moderate drinking
- Quality sleep
- No smoking
- Mentally healthy and happy

Social value and corporate value

We will help more employees to work energetically in their own ways, happy and healthy both mentally and physically, and create innovation driven by active communication.

We aim to realize the health and happiness of customers and local communities, and also to achieve sustainable business growth.
1 Governance

Structure for supervision and responsibility regarding respect for human rights

At the core of the Sekisui House Group's corporate philosophy is "love of humanity," the principle of valuing human beings is the foundation of the Group's corporate management.

Based on that principle, we have developed a human rights due diligence system. As stipulated in the Sekisui House Group Human Rights Policy, the Board of Directors of the Company has its consultative body, the Risk Management Committee (chaired by Satoshi Tanaka, Representative Director of the Board, Executive Vice President, Executive Officer) regularly inspect and supervise compliance with our Human Rights Policy and related initiatives.

With regard to human rights issues in the Group, the Social Improvement Subcommittee decides on priority issues and policies in the ESG management promotion structure. We have established a human rights due diligence working group under the Social Improvement Subcommittee, and are promoting information sharing and collaboration among several related departments.

Human relations promotion framework*

As a system to strengthen our corporate culture that strictly prevents infringement of human rights, discrimination, and harassment, we have organized the Human Relations Promotion Committee chaired by the President, from the promotion committees established in our departments, offices, and subsidiaries.

Every year, representatives of each promotion committee gather to hold a National Human Relations Promotion Committee Meeting. At the meeting, guidelines for human rights measures, Group-wide priority issues, training policies and training plans are shared.

Each promotion committee is responsible for promoting the initiatives decided at the National Human Relations Promotion Committee Meeting.

We have established the Human Relations Office in the Legal Department, as a dedicated department for overseeing human rights under the responsibility of the managing officer responsible for legal affairs. This office is in charge of promoting human rights due diligence, by running the consultation desk for harassment in the Group, implementing human rights awareness training, planning and operating human rights initiatives through the Human Relations Promotion Committee, supporting implementation on-site, and handling human rights issues when they arise.

* In-house human rights promotion structure in the Group. In addition to human rights issues that we have long been working on, such as Buraku (discriminated communities), we have established a structure to address the human rights of individual employees who are greatly impacted by relationships in the workplace, and to respond to a wide range of human rights issues as issues for the organization and workplace. In 2006, we established the Human Relations Office as a department that is responsible for the promotion of human rights.

2 Strategy

Commitment to human rights

In April 2020, we formulated and announced the Sekisui House Group Human Rights Policy. It was formulated with the advice of outside experts, and approved by the Board of Directors of the Company.

This policy respects international norms such as the International Bill of Human Rights, the ILO (International Labour Organization) Declaration on Fundamental Principles and Rights at Work, and Guiding Principles on Business and Human Rights, and supports the Ten Principles of the United Nations Global Compact. As a matter of course, we do not tolerate involvement in human trafficking, nor any involvement with companies or production regions where such involvement has been identified through transactions, nor do we tolerate any form of forced labor or child labor. In order to fulfill our social responsibilities in our global business activities, we have stated that we will respect the human rights of all stakeholders who may be affected in our business activities including our supply chain.

All Group officers and employees, including workers with shorter working hours, must comply with this policy, and all employees receive policy-related training. We also publish the policy on our website, and we expect all stakeholders inside and outside the Group to understand the Group’s policies and initiatives for respecting human rights.

Initiatives to respect human rights in our business activities

The Group has stated in its Human Rights Policy that it expects its business partners, including partner building constructors and suppliers, to understand and support the Human Rights Policy. We have included respect for human rights in our CSR procurement standards, and are working together with suppliers.

In our human relations promotion framework, we conduct three hours of human rights training (human relations training) for all Group employees every year. We also provide two hours of training to promotion committee members who are managers to help them obtain a deeper understanding of respect for human rights.

In addition, the Human Relations Office conducts in-house training as necessary by level and specialty, in order to prevent human rights violations, including all types of harassment.

Establishment and dissemination of CSR procurement guidelines

Following our support and signing of the Ten Principles in the four fields of human rights, labor, environment, and anti-corruption stated in the United...
Respect for human rights

Nations Global Compact in 2018, we joined the supply chain subcommittee of the Global Compact Network Japan (GCNJ), a local network based in Japan. In addition, we established the CSR procurement guidelines as a procurement initiative in our supply chain, and distributed them to our business partners.

The CSR procurement guidelines are based on the Self-Assessment Questionnaire (SAQ) for CSR procurement issued by GCNJ. We request that our business partners submit a signed agreement, confirming that they have agreed to understand and comply with the purpose and content of the guidelines, and to cooperate with periodic follow-up reviews and inspections by the Company regarding procurement initiatives. When commissioning a company as a new business partner, we require a signed agreement confirming an understanding of the guidelines before any transactions are conducted.

We conduct CSR evaluations of our business partners through self-assessment based on the SAQ issued by GCNJ, and use the results as one of the items for supplier assessments. In order to conduct fair and impartial transactions, we also disclose the evaluation results to our business partners. Assessment items related to human rights and labor are incorporated into the CSR evaluations. We use this information to identify risks, educate and implement relevant measures. The related departments, etc. share and aggregate information with relevant business divisions, and otherwise verify due diligence for labor practices and identify omissions to integrate this due diligence into the initiatives we execute to identify Company-wide issues, provide education, and make improvements.

Identifying important human rights issues in our business

In FY2020, we conducted a questionnaire format awareness survey and exchanged opinions within each business division, and identified five key issues for Group employees.

- Internet society and human rights (prevention of human rights violations that result from employees using social media)
- Power harassment
- LGBTQ (prevention of workplace harassment and discrimination in business activities)
- Overwork and stress of employees
- Non-Japanese workers (at business partners and construction sites)

Promoting human rights due diligence

Based on our Human Rights Policy, we have incorporated the process of human rights due diligence into our business activities, and employ a PDCA cycle in initiatives. Relevant departments, offices, subsidiaries, and other organizations ("related departments, etc.") are responsible for due diligence for human rights issues. In addition, we obtain information through dialogue with stakeholders and from advice and other information from experts and human rights groups. We use this information to identify risks, educate and implement relevant measures. The related departments, etc. share and aggregate information with relevant business divisions, and otherwise verify due diligence for labor practices and identify omissions to integrate this due diligence into the initiatives we execute to identify Company-wide issues, provide education, and make improvements.

In FY2021, we implemented human rights due diligence for issues we had identified as described in "Implementation and Countermeasures for Impact Assessment of Human Rights in Business Activities." Concurrently, the Human Rights Due Diligence Working Group took action including a review of the assessment of human rights risks related to Group businesses. A map of key issues follows:

Map of Human Rights Risks Related to Group Businesses

Dialogue with employees on freedom of association and respect for collective bargaining rights

As stated in the Human Rights Policy, all Group companies respect freedom of association and the right to collective bargaining. We shall comply with labor-related laws and labor-management agreements, and work to build constructive relationships through sincere dialogue and negotiations with 100% of employees including workers with shorter working hours, or their representatives.
Respect for human rights

Implementation and measures for impact assessment regarding human rights in our business activities

The Group values a broad array of perspectives including the opinions of stakeholders and related parties, as well as direct dialogue should human rights issues arise.

• Employees

We inculcate and update human rights awareness among all of our employees by taking up the theme of human relations training for all employees based on five Group-wide priority issues. We have striven to improve understanding of LGBTQ among our employees through training based on lectures delivered by Ms. Maki Muraki, representative of the certified NPO Nijiiro Diversity.

With regard to power harassment, as roughly 40% of consultations received by the Sekisui House Sexual and Power Harassment Hotline in FY2021 were related to power harassment, we recognize this as an emerging human rights issue.

With regard to overwork and stress, we have taken preventive measures in our housing sales and production departments, and Sekiwa Construction companies. In an environment that has changed dramatically due to the COVID-19 pandemic, we have used social media and the Internet for detailed communication. The Group is also focusing on reducing the total working hours of employees through workstyle reforms.

We work with non-Japanese construction technicians, including technical trainees, regardless of nationality or gender, and have focused on the working environment for such workers, including technical intern trainees, with different cultural and linguistic backgrounds.

We conducted questionnaire surveys of technical trainees at Group companies and their partner building contractors, and received responses from 211 trainees in their native languages. In response to the question “Do you want to work in Japan after you finish your technical training?” 81% of respondents answered “Yes, I do.” Given the possibility that some of them may have no choice but to work, we continue to provide many opportunities for dialogue with technical intern trainees.

We hold regular meetings and discussions with the five technical trainees who are employed at the Company, and they have given the Company a positive review, saying, “I find my work rewarding.”

• Customers

Continued dialogue with customers contributes to the provision of high-quality housing. Even after housing is provided, we accept opinions and evaluations regarding our overall service through regular inspections and questionnaires.

• Suppliers

We hold policy briefings every year to ensure that suppliers obtain a deeper understanding of our procurement activities. Approximately 150 companies participated in the briefings held in February 2022. For briefings, we invited an outside lecturer to speak on the subject of “Business and Human Rights in Supply Chains.”

Preventive approach

Reactive approach
Proper operation of our human rights reporting system

As stated in the Human Rights Policy, the Group has put several reporting systems, including our compliance helpline, in place to understand concerns and potential negative impacts on human rights resulting from our business activities. We are also appropriately operating our consultation desk system for full effectiveness.

The Human Relations Office has established a Sexual and Power Harassment Hotline to provide consultation on all human rights issues, including various types of harassment and consultation to create a comfortable working environment for employees with disabilities. In addition, we assign one male and one female in charge of the consultation counter (788 people total, as of February 2022) across 100% of our business sites, including at Group companies. We hold training sessions every year for employees in charge of the consultation counter to improve their skills and strengthen cooperation with the Human Relations Office. All employees are made aware of these consultation services through the Company intranet, human relations training manuals, and posters. In response to consultations and reports, we promptly make responses, and then conduct investigations and take corrective and remedial measures, as necessary. When using these services, we strictly protect confidentiality and ensure that the users will suffer no disadvantage due to their consultations and reports.

At our overseas subsidiaries, we have established consultation systems for each country and operating company. We also take inquiries about human rights on our public website.

• Human Rights Groups
Following our support and signing of the Ten Principles in the four fields of human rights, labor, environment, and anti-corruption stated in the United Nations Global Compact in 2018, we joined the subcommittees (HRDD and human rights education) of the Global Compact Network Japan (GCNJ), a local network based in Japan.

We also collaborate with related organizations that work on various human rights issues, including the Buraku (discriminated communities) issue, and continuously collect information and utilize it for in-house education and training. Related organizations working on human rights issues

• The Buraku Liberation and Human Rights Research Institute
• The Corporate Federation for Dowa and Human Rights Issue, Osaka
• Fair Hiring and Human Rights Awareness Promotion Center
• Osaka City Corporate Human Rights Promotion Council
• NPO Multi-Ethnic Human Rights’ Education Center for Pro-existence
• Normalization Society

• Sexual and Power Harassment Hotline

Our Sexual and Power Harassment Hotline has become a well-known and easy-to-use contact point, and handled 169 cases in FY2021. Besides harassment, the hotlines have also handled cases involving management and human relationships in the workplace. We tailor corrective action, advice and support to the content of each case.

• Employees Receiving Human Relations Training

A report confirmed that all organizational units received training (303 units in FY2021).
Activities and Other Related Information

Continuous human rights education for employees

• Human Relations Training
To raise awareness of human rights issues and foster a work environment in which employees can work comfortably, human relations training is held for all Group employees* every year, with work leaders at each business site serving as facilitators.

* Training manuals are distributed to temporary, part-time, and fixed-term employees as well, and all employees are encouraged to attend training.

FY2021 Promotion committee member training for managers (2 hours a year)
• Communication in the workplace to prevent power harassment
• Diversity management

FY2021 All employee training including managers (3 hours a year)
• Internet society and human rights
• LGBTQ - What is a workplace where everyone can work in their own way?

We selected two themes for all employee training, and one theme (power harassment) for promotion committee member training, from among the identified priority issues. Since 2020, we have implemented this training for all employees using the remote conference system.

• Soliciting Human Rights Slogans
Each year, we solicit human rights slogans from all employees and their families for Human Rights Week, from December 4th to 10th. In 2021, we held our 38th slogan solicitation, and a total of 25,058 entries were submitted, from which we selected one outstanding work and five excellent works. We are distributing posters containing these six works to various organizations and Group companies.

LGBTQ initiatives in the real estate business
In our real estate business, we have started to create a system to ensure that all prospective tenants, including LGBTQ individuals, are treated equally and fairly during screening. Among various initiatives, we are revising application forms and conducting training to raise awareness, including among partner real estate companies.

Initiatives to protect the human rights of non-Japanese workers
We reviewed the working environment for non-Japanese workers employed by our business partners at production facilities. We have reviewed signs at factories, collaborated with contractors in factories, and checked the working environments including working hours.
1 Governance

Occupational Health and Safety

We are working on systematizing safety management to improve the efficiency of analyzing trends in accidents and incidents throughout the Company. In addition, we have digitized the reporting of disasters to enable prompt reporting of accidents, information sharing, and more efficient information management. This enables us to digitize information and analyze disaster trends more accurately and meticulously.

In addition, in order to make the safety management system more efficient and reliable, we have developed and operated a “Safety Promotion App” to run on smart devices. This app makes it possible to quickly confirm and report on findings and corrections to partner building contractors and construction workers, as well as keeping a record of findings and records during safety patrols of construction sites.

In the event of an occupational injury or accident occurring at a construction site, the site shall inform the Construction Quality and Workers Safety Promotion Department, which shares the information with the entire Company.

Chief Inspector System

A Chief Inspector (an employee who has completed chief inspector training and earned qualifications as an inspector) carries out special inspections to ascertain the construction quality of a project, to determine the quality system in action and inspection capabilities, to provide support to on-site supervisors and construction managers for inspection work, and to implement quality improvements for critical control points.

Construction Quality Council

Consisting primarily of technology leads from each workplace, the council analyzes and evaluates construction quality inspection results. It systematically identifies flaws, studies and shares particulars necessary for improving quality, and promotes quality improvements ranging from plan proposals to implementing specific improvement activities.

Certification Training and Inspection Training

Inspector certification training and inspection training are carried out for on-site supervisors and construction managers to raise the standard of inspection techniques.

Visualizing construction quality level and assuring full accountability

We have introduced the Q-COMS and F-COMS construction quality control systems for managing and preserving construction quality records for every building and to provide internal controls. The CANVAS project workflow information system centralizes management of the data, such as construction site inspection records and construction management reports.

Quality control information is linked with photographs for the purpose of visualization, and a special app for construction site supervision by on-site supervisors and construction managers (at Sekiwa Construction for permanent works) on a smart device to provide timely worksite management and raise the level of quality even higher. We are also considering the method with such smart devices for checking quality in real time. Inspection data—based on input

Outline of Sekisui House Zero Hazard System

We bring together Sekisui House on-site supervisors, Sekiwa Construction companies’ construction managers, and the construction technicians of partner building contractors to make ongoing improvements in processes to maintain and improve construction quality. They have also set up an inspection system that assigns individual responsibilities.

Our Company-wide construction quality control system

Quality control plays an important role in the overall workmanship of a home. We employ a Company-wide system of quality control in the construction of every building to assure premium quality, ongoing improvement initiatives, and the management and preservation of construction quality records.

• Construction quality control systems to produce high-quality buildings

We bring together Sekisui House on-site supervisors, Sekiwa Construction companies’ construction managers, and the construction technicians of partner building contractors to make ongoing improvements in processes to maintain and improve construction quality. They have also set up an inspection system that assigns individual responsibilities.

Step by step in effectively implementing the basic cycle (left)

1. Identify source of risk, specify implementation items
2. Formulate annual health and safety plan
3. Announce health and safety policies
4. Implement and operate annual health and safety plan
5. Daily inspections and improvements
6. Incorporate worker feedback
7. Health and safety management structure
8. Partner building contractor health and safety activity evaluations
9. Document in writing and storage
10. Response in the event of an emergency or accident
11. Evaluate system
12. Revise system

Value Creation Story
data—is collected and analyzed, and used to set directions for construction quality improvement initiatives.

We are also creating a practical accountability support system to provide explanations to homeowners during construction, which will help prevent misunderstandings and distrust due to lack of information.

On-site supervisors use tools created with the CANVAS system, such as quality plans and quality reports, to provide explanations of matters as required at whatever stage they are needed. By fulfilling our duty of accountability, we are able to put homeowners at ease at the end of construction, allowing them to plan and prepare for moving in.

Outline of Company-wide Quality Control System

2 Strategy

Priority themes and outline of a plan for construction site accidents for the fiscal year

The Group is promoting initiatives to reduce accidents, including those at construction sites. Our priority themes for FY2022 were “elimination of fall accidents,” “securing appropriate working environments,” and “prevention of accidents involving general public.” In particular, in response to an increase in fall accidents in the previous fiscal year, we are focusing on eliminating fall accidents, which carry a high risk of serious injury. In FY2022, we will continue to thoroughly implement the practice of basic safety activities, and establish practical measures to realize safe and secure construction sites.

• Outline of annual construction health and safety plan for FY2022
  • Further intensify our focus on countermeasures against serious accidents (that could potentially be fatal to humans), such as fall accidents.
  • Properly arrange equipment and work spaces at the construction site to create an environment where constructors can work safely with a sense of security.
  • Thoroughly prevent recurrence and establish a system to prevent incidents for events that may lead to human-related accidents, such as falling objects and contact with heavy machinery.
### Occupational Health and Safety

**Occupational accidents at construction sites**

- The number of occupational accidents resulting in one or more days of lost worktime at construction sites was 99% of that in the previous fiscal year, so the trend has leveled off.
- Although there had been no fatalities since 2018, there was one fatality (enrollee of special enrollment insurance for small and medium-sized business operators) in FY2021.
- The number of falls that lead to serious accidents (one day or more days of lost worktime) was 158% of that in the previous fiscal year.
- Heat strokes (one day or more days of lost worktime) decreased to 53% of that in the previous year. There were no cases of long-term lost worktime with a high rate of serious illness.
- While there were no human-related accidents, instances of components falling have been reported. Therefore, we will continue to take preventive measures such as investigating the causes of accidents, ensuring thorough risk management at the planning stage, and ensuring the implementation of measures to prevent recurrence.

**Calculation standards**

- Lost worktime injury frequency rate: Number of fatalities and injuries due to lost worktime per million total working hours.
- Occupational illness frequency rate: Number of occupational illnesses per million total working hours.

**Value Creation Story**

1. **While there were no human-related accidents**, instances of components falling have been reported. Therefore, we will continue to take preventive measures such as investigating the causes of accidents, ensuring thorough risk management at the planning stage, and ensuring the implementation of measures to prevent recurrence.

**Mechanisms and Catalysts for Sustainable Growth**

1. **To prevent accidents involving the general public**, we worked on the priority themes of “elimination of fall accidents” and “prevention of toppling accidents.”
2. **We focused on the construction environment as part of our “thorough measures to prevent falls,” which can lead to serious accidents (accidents that could be fatal).**
   1. We have begun to confirm the factory shipping of handrails to install around the outer periphery of buildings, as well as consider expanding the scope of our support for temporary handrails.
   2. We have clarified standards for installing scaffolding around internal stairways, and are now in the process of verifying sites to put them into practical use.
3. **As part of our fall prevention measures**, we have promoted thorough measures to keep worksites tidy.
   1. We have placed a priority on tidying up, securing safe walkways, and preventing slippage, thereby strengthening check items when patrolling sites.
   2. As tools to promote tidying up on site, we have newly added and utilized 11 items related to tidying up in our Safety Promotion App.

**For Sustainable Growth**

1. **We have focused on the construction environment as part of our “thorough measures to prevent falls,” which can lead to serious accidents (accidents that could be fatal).**

**Scope of aggregation: contractors for Sekisui House (including sole proprietors and employers)**

**Source:** Ministry of Health, Labour and Welfare, “Survey of Industrial Accidents”
Benefits programs for partner building contractors and working with the Sekisui House Association

The greatest strength of the Group is the Sekisui House Association, which consists of Group companies and partner building contractors involved in construction. As of February 2022, the association includes the 15 companies in our Group company Sekiwa Construction Ltd. and approximately 7,000 partner building contractors throughout Japan (including the partner building contractors of Sekiwa Construction companies, which are members of the Sekiwa Association).

From its very start, Sekisui House has pursued “design-build” construction. Our partner building contractors are irreplaceable, and we hold them in high regard, fostering relationships of trust and mutual interest that will last over the long term in the spirit of a “community with a common destiny.”

To realize customer satisfaction, the Sekisui House Association cooperates with each Sekisui House office to pursue initiatives aimed at implementing safety measures, improving construction quality, providing solutions for customers and neighbors, achieving zero emissions, keeping the construction site tidy, developing worker skills, and improving working conditions.

The association also serves as a place for information exchange that allows individual workers and partner building contractors to share issues they face and study possible solutions, and offers training and study opportunities to improve work processes and construction quality.

And, the Sekisui House Association is a tremendous driver of action for us in times of natural disaster, such as when an earthquake or flood strikes, from the initial response to actions required for restoration and reconstruction.

We will continue striving for customer satisfaction by working with the association and raising the value of the Sekisui House brand as we work toward shared goals.

Achieving Customer Satisfaction with the “Shared Goal” Mindset

We also run various benefit programs to support partner building contractors and construction technicians who work on our construction sites across Japan.

The Sekisui House subsidy system is designed to support improvement in workforce management at partner building contractors and to expand benefits for construction workers. The amount of subsidies given in FY2021 totaled about ¥0.93 billion.

The Sekisui House Cooperation Association was established in 1982 to improve employment practices and expand benefits to partner building contractors. It assists in the running of various systems at Sekisui House, including our construction site safety assurance system and funded pension system.

Initiatives to improve work site productivity

With the total number of construction workers on the decline, we are working to ensure ongoing, reliable construction management by strengthening our technologies, while also taking steps to make the most of our existing construction capabilities. We have launched two sets of working groups to improve productivity and reduce person-hours—one to focus on solutions employing physical resources and the other to focus on solutions involving systems and people. We have organized a Technical Directors’ Council, Construction Management Committee, and Worksite Productivity Improvement Working Group, consisting of technical deputy directors representing locations around the country, the head office, and factories. We are identifying and studying issues that lead to increased productivity, such as the SHAWOOD large-scale fixed sash combined construction method to reduce the burden of construction.

In August 2019 we established the House Association–Sekiwa Construction Factory and Construction Committee to discuss, review, and provide feedback in response to construction site improvement requests submitted by the Sekisui House Association and Sekiwa Construction.
Sekisui House Chief Technician certification

The Sekisui House Chief Technician certification, established in 1983, is a self-certification system run by the Sekisui House Cooperation Association. In April 1985, this certification became the first of its kind in the construction and housing industry, obtaining ministerial authorization for being in line with national certifications.

The examination is held once a year, and in FY2021, 147 people passed. Certified individuals now number 6,348, and the certification is helping on-site work leaders to maintain and improve construction quality.

The purpose of the certification is to evaluate the skills of technicians fairly and appropriately, and to maintain and improve quality. To be eligible to take the certification exam, one must have three years or more experience doing the relevant type of technical work on-site for Sekisui House, plus complete a short course. The three types are: foundation work, framing/exterior work, and interior finishing.

After obtaining the certification, further experience leads to becoming a Construction Meister.

The Construction Meister System

The Sekisui House Group has two systems that honor superior technicians in the field across Japan—the Construction Meister System and Sekisui House Remodeling Meister System.

The Construction Meister System, established in 2010, recognizes the technical skills of construction workers at our construction sites and honors them as superior technicians. Its aim is to foster the development of advanced skills in young workers. Certified Construction Meisters boost the motivation and pride of all construction technicians by becoming role models, fostering an atmosphere of diligence and the pursuit of high-level skills, thereby contributing to higher quality and greater customer satisfaction throughout the Company.

In FY2021, we had a total of 360 certified Construction Meisters—77 foundation work technicians, 102 framing/exterior specialists, and 181 interior carpenters. Among these are 80 First Meisters and two Top Meisters. Each recipient is awarded a certificate and incentive pay. Since 2010, a total of 3,227 Sekisui House technicians have been certified as Construction Meisters.

In 2020 we created a new Quality Champion Commendation System to honor Construction Meisters who are exceptional promoters of quality. The commendation also focuses attention on our social responsibility as a leading construction company to ensure superlative quality and technique. Under this new system, 66 Construction Meisters and 67 Construction Meisters were commended for quality in FY2020 and FY2021, respectively.

We also have the Sekisui House Remodeling Meister System, established in 2008, which certifies and registers superior technicians working for partner building constructors who do remodeling work for Sekisui House. The certification system also extends to a number of areas including homeowner satisfaction, work volume, attitude and consideration for others on the construction site, attention to safety, management capabilities, and ability to foster young talent.

Training centers and training schools

Sekisui House has established training centers and training schools where we conduct training that allows technicians from each company in the Sekiwa Construction group as well as technicians hired by partner building contractors to learn techniques and acquire skills. The schools also teach proper conduct to facilitate interaction as members of society and prepare trainees for the working environment.

Our schools are unique in that they do not merely provide the opportunity to acquire technical skills and knowledge necessary for construction with Sekisui House, but also the opportunity to study our corporate philosophy, which is indispensable for achieving customer satisfaction.

In FY2021, classes were held under strict restrictions due to the COVID-19 pandemic, with 28 trainees completing the framing/exterior course and 53 completing the interior finishing course—a total of 81 technicians. A total of 2,968 technicians have completed courses and are working as construction technicians and construction managers around Japan. After completing training, we hold variety of training at each center, and are working continuously to improve technical knowledge and skills.
Overseas technical training centers

In November 2019, with our facility in Hanoi, Vietnam we became the first housing manufacturer to establish a technical training center in Vietnam for housing construction. The center strengthens our system for taking on technical trainees from Vietnam.

We have a service agreement with the JIC Kyodo Kumiai Support Association to help local organizations make preparations for recruits. The center gives technical trainees a chance to learn Sekisui House’s construction techniques and study Japanese in a practical way while remaining in familiar surroundings in their home country so that they can start work without any problems when they arrive in Japan. Explanatory meetings for families, training fees, and other expenses are all covered by Sekisui House, and a supportive atmosphere is created so that technical trainees can work in Japan without any concerns.

In January 2020, the six trainees who went through the foundation course in Hanoi came to Japan. Since that time, however, the spread of COVID-19 has prevented us from conducting education or training as planned.

In 2021, we began supporting recruitment interviews, technical training lectures, Japanese language study and other activities online. We are also hiring more local staff and establishing a system that enables us to conduct training at any time, in preparation for resuming the entry of technical trainees into Japan.

- **FY2021 Results:** 17 trainees coming to Japan, 11 trainees interviewed for recruiting

Initiatives for occupational health and safety by Konoike Construction (a Group company)

Konoike Construction, one of our Group companies, has maintained certification for the Construction Occupational Health and Safety Management System (COHMS) since 2014 at all offices as an initiative for occupational health and safety, and conducts regular internal audits.
Strengthening Our Sustainability Governance System

Promoting Compliance

Strengthening Risk Management
Strengthening Our Sustainability Governance System

1  Governance

ESG Promotion Committee

We have established the ESG Promotion Committee, which includes two external committee members with special expertise, as a consultative body to the Board of Directors. The committee meets once every three months and enhances its effectiveness by exchanging views on the progress and challenges of our ESG management initiatives.

In addition, with the ESG Management Promotion Headquarters acting as a responsible department, and based on discussions in the ESG Promotion Committee, we are working to further promote ESG management, both within our Company and in collaboration with Group companies in Japan and overseas.

Discussion about sustainability in the Board of Directors

The ESG Promotion Committee discusses the planning, formulation and execution of the Group's basic policies concerning ESG management. The committee reports on its activities to the Board of Directors as necessary. In addition, the Board of Directors discusses basic sustainability policies such as investment in human capital and intellectual property.

2  Strategy

Sustainability basic policy

With the aim of becoming a leading company in ESG management, and in order to achieve our global vision, the Board of Directors has set ESG initiatives as priorities that support the Group's management foundation, and the board is promoting these initiatives by incorporating them into the Mid-Term Management Plan.

Guided by resolutions by the Board of Directors, the Group has identified increasing the quality of housing stock (customer happiness), contributing to a sustainable society (social happiness), and diversity and inclusion (employee happiness) as material (essential) issues when promoting ESG management, and the Group is implementing initiatives to address materiality.

In addition, we have sought to analyze medium-to-long-term issues that affect value creation with relation to sustainability, identify risk factors, and position them as opportunities for future business development.

To provide new value to our customers and society as a partner in creating happiness, we are implementing a human resources strategy with the aims of diversity and inclusion, workstyle innovations, and self-directed career development. The Company has formulated a health management policy based on the belief that improving physical and mental health, which are integral to an employee’s happiness, is indispensable to the realization of the Company’s global vision, and is therefore engaged in promoting “happiness” health management.

By both investing in intellectual property and protecting the results of our investments, we have built up our core competencies of technical capabilities, construction capabilities, and customer base. In addition, by demonstrating our competitive advantage through our unique value chain that handles all of the processes of housing development, we provide value to our customers, which forms the basis for supporting continuous corporate growth.

Enhanced governance for ESG management

We are moving forward with governance reform at three levels.

- Governance reform at the top management level
  - Governance reform at the business management level
  - Governance reform at the Group employee level

- Governance reform at the top management level
  - Building corporate governance mechanisms necessary for sustainable improvement of corporate value while gaining the trust of stakeholders

- Governance reform at the business management level
  - Creating mechanisms and rules to ensure thorough compliance with laws and regulations at each office organization while strengthening management functions

- Governance reform at the Group employee level
  - Becoming a driving force to revitalize in-Group communication and advancing governance reforms at the levels of top management and business management

Strengthening Our Sustainability Governance System

In order to promote ESG management with the participation of all employees, we hold ESG dialogue between employees divided by level, under the theme of “how to manage our business to ensure greater happiness for employees, customers, and society.”

Throughout Group companies, ESG dialogue is encouraged to develop initiatives aimed at creating a virtuous cycle of fostering employee engagement, accelerating communication, and generating innovation, which will then increase our corporate value.

In addition, we strive to vitalize communication, which tends to be lacking as smart work is becoming the standard practice. To do this, we provide opportunities for communication and training, including opportunities for dialogue in line with themes based on the Group vision during Corporate Ethics Month (every October) as set by the Japan Business Federation (Keidanren). We also provide opportunities for exchanging opinions on organization-wide issues based on the results of the Governance Awareness Survey, an anonymous questionnaire survey for all employees conducted every year* on awareness of corporate ethics, the working environment and other factors.

Based on the Sekisui House’s corporate philosophy, we use an anonymous questionnaire to conduct an annual governance awareness survey with all Group employees and Sekisui House Group employees to verify that workplace environments have been changed to produce the next generation of business leaders. Further, we provide a range of training courses for branch managers and leaders to strengthen the ability of individual branches and teams to manage, develop human resources, and invigorate their organization. These courses also support employee career development.

For health management, we conduct a Well-Being Survey of all employees, and offer advanced proposals through Sekisui House FIT, our smartphone app developed in-house, to promote exercise and prevent lifestyle-related diseases.

Investing in intellectual property

Among our intellectual property, we work to protect technology and designs with patent rights and design rights. In addition, we also strive to protect feedback from our customers, as well as the expertise and data we have accumulated through many years of efforts, as important trade secrets. We are very particular about naming at the stage of commercializing investment results, and protect those names with trademark rights, treating names as symbols of how we provide customers with satisfaction and peace of mind throughout the value chain. In addition, we are now placing higher than ever importance on these activities, and in August 2021 we established the Intellectual Property Office as a specialized organization to oversee intellectual property. We are complementing in-house human resource development by hiring intellectual property specialists, including people who have been responsible for intellectual property at other companies.

In addition, in recognition of the importance of research and development, we are investing an adequate amount in research and development expenses and making active capital investments in our R&D bases, with a focus on the Comprehensive Housing R&D Institute and the Human Life R&D Institute. In recent years, we have actively invested in fields that contribute to the promotion of future businesses through industry-academia collaboration and partnerships with companies in different industries, with a focus on new business areas such as the Platform House business. Furthermore, we have actively invested in areas outside of direct technology development, as well as Nattoku Kobo, which provides opportunities for a variety of living environment-related experiences. We have integrated the results obtained from these investments and positioned them as management resources (intellectual capital).

Governance awareness survey of all Sekisui House and Sekisui House Group employees

Based on the Sekisui House’s corporate philosophy, we use an anonymous questionnaire to conduct an annual governance awareness survey with all Group employees to verify that workplace environments have been changed to ensure that everyone is working together effectively throughout the Group. By regularly surveying awareness of corporate ethics, the workplace environment and other factors, we gain an understanding of the current situation, and based on the survey results we provide opportunities for exchange of opinions on an organizational level as we focus on creating a more open workplace culture.

Commendation system incorporating ESG indicators

To promote ESG management throughout the Sekisui House Group, we have incorporated ESG indicators into the President’s Awards for workplaces. In line with our ESG promotion policy, we have set eight objective indicators directly related to business: leading the way to a decarbonized society and protection of ecosystems under environment; health and productivity management and employee happiness under social; and strengthening management at workplaces under governance. From August 2021, we have introduced a similar commendation system, after selecting indicators that match the business contents of Group companies Sekisui House Real Estate, Sekisui House Remodeling, and Sekisui House noie.

* Some offices implemented this program in FY2021 due to the unified timing for implementation across the Group.
Promoting Compliance

1 Governance

System for promoting Group-wide compliance
To ensure that the entire Group complies with all applicable laws and regulations, we have established a specialized functional department in charge of compliance and a management department that comprehensively manages each business unit. The specialized functional department promotes cross-sectional management of the respective duties for the entire Group's divisions, in cooperation with the business management divisions. For further improvement, the status of management is reported and verified by the Risk Management Committee, which was established as a consultative body to the Board of Directors.

2 Strategy

Sekisui House Group Corporate Ethics Guidelines
In October 2003, the Group formulated the Sekisui House Corporate Ethics Guidelines and put them into effect as the standards to be followed by the Company, its officers and employees. The content of these guidelines is revised as necessary in line with changes in the business environment. Since 2005, we have been holding Corporate Ethics Month every October to spread awareness among all Group executives and employees. In addition, every year we have executives and employees submit a Pledge of Compliance with the Corporate Ethics Guidelines.

From the viewpoint of anti-corruption, we have also stipulated entertainment ethics, gifts in these guidelines with respect to customers, suppliers, public officials and other individuals. Based on that provision, we have established Anti-Corruption Guidelines and are disseminating information on them within the Company.

Compliance training implementation
We provide all Group employees with legal training every year on themes such as laws and regulations and risk as a continuous effort to foster compliance and risk awareness. In FY2021, in response to a comprehensive evaluation report on an incident involving transactions for land for condominiums, we conducted one hour of training for all Group employees for the purpose of disseminating information, and reported on the status of this training to the Board of Directors. From FY2022, we will change the name to Compliance Training, and work to foster an awareness of compliance and risk in a wide scope that extends beyond laws and regulations.

Internal reporting system and whistleblower protection
We have a whistleblower system in place for all Group employees. In compliance with the Whistleblower Protection Act, employees notify the Compliance Office in the Legal Department by email or telephone of any conduct that violates laws or corporate ethics. Our corporate law office has served as an external point of contact since October 2016.

In September 2021, we changed the name to the Sekisui House Group Compliance Helpline, and made changes to the system, such as handling reports anonymously, and sharing information on reports to external contact desks with the Audit and Supervisory Board. In line with the amendments to the Whistleblower Protection Act in June 2022, we make corporate officers subject to whistleblowing up to one year after their retirement or the end of their tenure, and established Company regulations setting forth responsibilities for corporate officers, including prohibiting them from conducting disadvantageous treatment of whistleblowers on the basis of such whistleblowing.

Note: We also provide an external (outside the Company) contact for counseling by a professional for Group employees and their families.
Promoting Compliance

We also provide helplines that provide counseling on labor management issues in general and hotlines dedicated to consultation regarding sexual and power harassment.

In addition, the Sekisui House Group Supplier Company Corporate Ethics Helpline has been established as a system for handling consultation regarding concerns pertaining to legal and corporate ethics infractions and transaction-related issues connected to Sekisui House Group business activities from directors or employees of partner building constructors and supplier companies with whom the Group has an ongoing business relationship. Furthermore, in June 2020, we established and began operations of the Sekisui House Global Helpline for employees of our overseas subsidiaries in English-speaking regions, using a third-party law firm as a contact point (another contact has been established for subsidiaries in China with Chinese language support).

Though it would be ideal to solve problems through discussions in the workplace, we also believe it is important to have an internal reporting system in place that employees can freely turn to for help. We educate employees about this system with leaflets and human relations training.

Personal information protection initiatives

To follow the amendments to the Personal Information Protection Law enacted on April 1, 2022, we have revised the Rules for Handling Personal Information. We have also designated the executive officer in charge of legal affairs as the person in charge of handling personal information, and are working to manage personal information with effective systems. Our Privacy Policy and Information Security Policy are disclosed on our website.

We handle customers’ personal information at Sekisui House Group worksites, such as housing exhibitions and land sales offices. In accordance with the Personal Information Protection Law and the Rules for Handling Personal Information, we have implemented ongoing e-learning and educational training for employees. We are promoting the full awareness of personal information protection among employees.

In addition, we have set up a specialized Customer Information Service Office within the CS Promoting Department, and have established a system that supports compliance with the Personal Information Protection Law for the entire Group. Among various options, customers may request disclosure, correction, suspension of use or deletion of their own personal data by lodging a Contact for Personal Information. Inquiries About Customer Information application with the Customer Information Support Helpline, and have established a system that supports compliance with the Personal Information Protection Law for the entire Group. Among various options, customers may request disclosure, correction, suspension of use or deletion of their own personal data by lodging a Contact for Personal Information. Inquiries About Customer Information application with the Customer Information Support Helpline.

Additionally, in view of the fact that personal information protection laws are being put in place in various countries around the world, we are making efforts to protect personal information in our overseas businesses as well, by developing systems, providing training and other means in accordance with the businesses we operate in each country to comply with local laws and regulations.

3 Risk Management

Initiatives for compliance with laws and regulations related to construction

The Group obtains permits and licenses based on laws and regulations, such as the Real Estate Brokerage Act, the Construction Business Act, the Act on Architects and Building Engineers, and the Housing Quality Assurance Act. At the same time, we conduct business activities based on administrative regulations, as well as laws and other regulations related to construction, labor, the environment, and other matters involved in executing business. Violation of laws and regulations related to construction in particular could incur significant expenses for remediation or administrative sanctions, such as suspension of business that could affect the Group’s business performance.

Measures to prevent compliance violations include a legal and regulatory check system to verify mistakes and omissions of procedures for design, according to the Building Standard Law, and we have structured a double check system for branches and the head office to prevent the occurrence of mistakes for type approval. In addition, to ensure the effective assignment of full-time technicians under the Construction Business Act, we are checking their assignment status and are continuing to secure qualified personnel and improve their skills.

Basic policy on tax

The Sekisui House Group recognizes a significant responsibility to respect stakeholders’ trust. To safeguard this trust, the Group must comply with regional tax laws and regulations in Japan and internationally where the Group operates and to make tax payments transparently and appropriately, observing the principle of tax fairness. Disclosure of the Group’s basic tax policy follows.

4 Indicators and Targets

In FY2021, there were no serious violations of laws, regulations, or voluntary norms related to bribery or corruption within the Group.

Promoting Compliance

Legal compliance status

• Penalties for non-compliance of the anti-corruption policy
In FY2021, no disciplinary action or dismissal took place against any employee for non-compliance of the anti-corruption policy. To the best of our knowledge, no cost was incurred on penalties, surcharges or settlement related to corruption.

• Infractions and penalties related to the environment
There were no major infractions or penalties of environmental laws or regulations in FY2021. There were no accidental spills or other incidents impacting the environment surrounding our factories. No environment-related fines were imposed on the Group.

• Infractions and penalties related to products and services, safety and hygiene
In FY2021, there were no legal or regulatory infractions or penalties paid related to the provision and use of our products and services. There were also no infractions of health and safety related regulations or voluntary standards.

• Infractions and penalties related to customer privacy
In FY2021, there were no substantiated petitions for redress related to customer privacy infringements or customer data loss.

• Legal action related to monopolistic practices
In FY2021, the Group faced no legal action, substantial fines or punitive measures in connection with violations of laws or regulations related to competition and monopolistic practices.
1 Governance

Our risk management system

The Group has established a Risk Management Committee (chaired by Satoshi Tanaka, Representative Director of the Board, Executive Vice President, Executive Officer) as a consultative body to the Board of Directors, with the aim of accurately understanding important risks in business activities, monitoring whether those risks are properly managed, and mitigating the impact on the Group’s businesses in the event that such risks materialize.

This committee meets once a month, in principle. Based on the monitoring results of departments at the head office and bodies meeting to discuss target risks, the committee summarizes and verifies the development of the risk management system, gives advice, and regularly reports on deliberations to the Board of Directors. Moreover, we recognized the importance of quality control and information security by establishing the Quality Management Committee and the Information Security Committee within the Risk Management Committee. These committees take a professional, intra-divisional approach to reviewing risks as well as countermeasures, and regularly report their deliberations to the Risk Management Committee.

Risk Management System Diagram

2 Strategy

Risk management process

We monitor the Group’s domestic offices as well as domestic and overseas subsidiaries, and we conduct interviews with every department in the head office. The Risk Management Committee uses the information from monitoring and interviews conducted during the previous fiscal year to identify risk issues under themes that include labor law and labor management, human rights, compliance, quality management, information security, the environment, and crisis management. Each year, the committee then evaluates the probability of occurrence and degree of impact on the Group for these risk issues, and selects material risks based on these evaluations. The department responsible for each important risk theme and meeting bodies formulate a basic risk management plan at the beginning of each fiscal year, report on progress to the Risk Management Committee, and make improvements based on the opinions and advice of the committee, in this way using a PDCA cycle for risk management.
Strengthening Risk Management

3 Risk Management

Strengthening the quality control system

The Group takes all possible measures to ensure the quality of design, production, and construction. It also implements a long-term warranty system and regular inspection service for our detached houses and multi-unit residential buildings, which are our core products. If serious quality problems occur due to unexpected human errors or other factors during our long support period, considerable costs could be incurred or the reputation of the Group could be severely degraded, which may affect the business performance of the Group.

As a countermeasure, the Quality Management Committee, within the Risk Management Committee, promotes unified quality management as an organization that brings together five study groups for products, design, production, construction, and customer satisfaction. In particular, the Quality Management Committee helps prevent construction quality defects through improvements to the quality control priorities that are based on the annual construction quality management plan formulated at the beginning of each fiscal year, and regularly reports the status of initiatives to the Risk Management Committee. We are also promoting multifaceted initiatives aimed at securing construction competencies, especially those closely related to construction quality, such as leveling the amount of construction work, improving onsite productivity, and proactively training technical trainees, including workers from overseas.

Initiatives to strengthen information security

Infection by computer viruses and advanced cyberattacks could allow personal information to leak or be tampered with or cause system shutdowns. This could have a wide range of adverse consequences that could negatively affect business performance, confidence in the Group, competitiveness, stock prices, and shareholder value.

The Group has positioned information security as one of the important management issues to address in order to minimize risks that may hinder the continuation of the business itself, such as information leakage or suspension of operations caused by a cyberattack. For that reason, we have established the Information Security Committee (chaired by Osamu Minagawa, Managing Officer) to make a more specialized response to risks, under the Risk Management Committee, which is a consultative body to the Board of Directors. A priority issue is establishing an information security governance system that includes the entire Group and is based on the Information Security Policy, which is the fundamental policy for Group information security, and associated rules for managing confidential information.

With regard to IT system development, operation, and management, we are continuing to develop environments for the effective processing of business affairs, and regularly review our rules and standards. In addition, we are developing processes to follow in the event of security incidents, with progress confirmed by the Information Security Committee.

We are adopting work styles that are not limited and are taking stronger measures that are suitable for the multi-cloud era. We are also consolidating important data on a cloud platform, and distributing tablet terminals that are specialized for remote connection to the Company to those employees who request them, thus migrating from conventional PCs to secure mobile PCs. In response to diversifying workstyles amid the prevailing trend of telework and the new threat of cyberattacks, we are strengthening technical measures and enhancing organizational strength at the same time. Regarding procedures to prevent IT system failures and cyberattacks, we are continuously striving to increase the e-literacy of employees and improve the procedures by providing education and training every year and on other occasions as necessary.

We also manage customer information based on our rules for handling personal information and our Privacy Policy, with each organizational unit assigning a manager responsible for handling personal information, implementing safety measures, and establishing a system to thoroughly inform all employees. At the same time, we teach employees through online courses how to handle personal information, and we raise awareness of the roles and responsibilities of each employee regarding the protection of personal information.

We regularly check current security levels through security assessments by external organizations to strengthen our security governance system.

Promoting labor management

Long working hours for employees can lead to health problems, including mental illness, and in some cases can lead to extended leaves of absence. In addition, we need to avoid occupational accidents at offices and construction sites. Especially at construction sites, mistakes in work procedures and work methods can lead to injuries, and a serious or even fatal accident could result in monetary damages and reputational damage with the general public.

We counter these risks with labor management that promotes workstyle reforms to curb long working hours and to keep tabs on the status of work at the head office, factories and offices every month. The Human Resources and General Affairs Department promotes effective labor management as necessary by monitoring and through labor management training. In addition, every organizational unit helps to prevent occupational accidents through a health and safety committee that regular verifies disaster prevention, situations that involve accidents, and then implements measures to prevent any recurrence. A particular emphasis at construction sites is creating a safe and secure work environment based on the annual Company-wide construction health and safety plan under the direction of the Construction Headquarters at the head office to reduce frequent accidents. Other initiatives include compliance with procedural manuals and setting up a confirmation system.
Response in the event of a natural disaster

The Sekisui House Group recognizes that it is the mission of housing manufacturers to quickly restore the lives of customers that suffer from large-scale natural disasters and provide new housing, including emergency temporary housing. To this end, we have established the Action Program for Handling Natural Disasters that prescribes Company-wide policies and measures.

In the event of a large-scale natural disaster, the first step toward recovery is to quickly ascertain the condition of employees and their families in the affected region. The speed of initial responses is linked to the formation of support systems for worksites and rapid response to Company-wide needs, which in turn enables us to promptly provide support to customers. For this reason, we not only conduct periodic evacuation drills at each worksite, but also require all employees to always carry a response survival card containing safety reporting procedures and other information to be used in the event of a natural disaster.

We confirm the condition of our employees and their families, while setting up a Disaster Response Headquarters at our head office to respond to the disaster by sending relief supplies using each factory as a base for a quick response. We also cooperate with local response headquarters to facilitate a swift recovery.

In addition, we currently have a Customer Service Center Owner Desk in Osaka and Fukuoka that can respond to house owners' requests for consultation and urgent repair 24 hours a day, 365 days a year. We carry out integrated and complementary operations to ensure that these desks can fill in for each other in the event of a large disaster and support customers by serving as emergency reception centers capable of coordinating with the Customer Service Center in the affected region as well as with Sekisui House Remodeling, Ltd.

Business continuity planning

Delays in the initial response due to unclear response plans during large-scale natural disaster could impair business continuity at our locations, which could in turn affect the Group’s business performance.

The Sekisui House Group maintains preparedness through business continuity planning (BCP) to cope with major natural disasters. The Group has also formulated the Sekisui House Group Basic Policy Concerning Disaster Countermeasures. A disaster manual has also been released to every organizational unit, and we are prepared to ensure business continuity at all business sites in the event of a disaster.

In the event of a disaster at the head office, we are prepared to continue business operations through offices that can serve as substitute head offices: the Tokyo office (Akasaka, Minato-ku) and the Comprehensive Housing R&D Institute (Kizugawa, Kyoto).

We do business internationally, which puts the employees of overseas subsidiaries and employees on international business trips at risk from natural disasters, terrorist attacks and riots. We have created a response manual that incorporates a system for prompt information sharing, and we have contracted with a specialized overseas crisis response support company to have a support system in place for our local employees in the event of an emergency.
